Configuring the Devices software

ort Settings

It is very important that you understand the basic concepts of setting up your devices with or without a Port Juggler.   For instance, if you have a Color StyleWriter plugged into the printer port, you should make sure that you select the printer port icon in the Chooser when you select the Color StyleWriter driver.

irtual Port Settings:
PaperPort - Wacom - Fax software - ARA

We provide virtual "ports" for the following devices, ONLY when attached to Port Juggler's Port 1.   It is imperative that if you have one of these devices or software assigned to Port 1, that you select the matching port name or icon within the devices or programs software.   Here are some examples of these virtual port settings for: PaperPort software, Wacom tablet software, a few of the more popular fax software programs.

Visioneer PaperPort & HP ScanJet 4s

When PaperPort is connected

to Port Juggler's Port 1, it gets

a new port.   Select the

"PaperPort" port located in

the Connections setting in the

PaperPort Control Panel.
Port Juggler will automatically
activate and deactivate the
PaperPort software when
switching between devices
on ports 2, 3, and 4.

Wacom graphics Tablet

When the Wacom graphics
tablet is connected to Port
Juggler's Port 1, it gets
a new port icon.   Select the
"Wacom Port" port in the
"Comm. Port" setting in
Wacom's Control Panel.   Port

Juggler will automatically

activate and deactivate the

tablet software when

switching   between devices on

ports 2, 3   and 4.

Fax software

When a fax modem is connected to Port Juggler's Port 1, it gets a new port icon. Select the "Fax" port within your fax software.   Port Juggler will automatically activate and deactivate the fax software when switching between devices on ports 2, 3 and 4. Following are a few of the more common brands of fax software and their port setting locations.   Otherwise refer to your fax software manuals to find where the settings are located.

GlobalFax (Global Village)

Fax software settings are

in the Teleport Control

Select "Select Port...",

will open a dialog window

you can select the "Fax"

Global

located

Panel.

which

where

port.

FaxSTF

FaxSTF software settings are located in the STF Settings application, which is located within the STF™ folder on your hard drive.   Once you are in the Settings, select Connection from the menu on the left.   This will open the Connection Settings window on the right side.   Select "Fax" port.

AXcilitate

AXcilitate software settings are located in a pulldown menu located in the top menu bar of the desktop window.   Select

the FAXcilitate icon, scroll
down and select "Preferences",
finally select "Fax Hardware".
This will open a dialog window,
select "Fax" port from the
"Port" menu.

pple Remote Access

Port Juggler supports both Apple Remote Access server and client software.

ARA Server without Fax Software

If you are an ARA server and do not have fax software, assign Apple Remote Access to
Port 1 on the Port Trigger List.   After restarting the Mac,   go to the ARA Control Panel
and select the "ARA" port.   Also check the box to answer calls.   Port Juggler software
will take care of automatically deactivating and activating the ARA software when

switching between devices.

RA Server & Fax Software

If you want to have both fax and ARA software together you need to understand that only one or the other can be active at a time.   Assign Apple Remote Access and Fax Modem to Port 1 on the Port Trigger List.   Setup the fax software port settings to "Fax" port.   Then go to the ARA Control Panel and select the   modem port.   The fax software will receive incoming calls until you check the box to answer calls in the ARA Control Panel.   Port Juggler software will then deactivate the fax software and ARA will have control of the incoming calls.

ARA Client

If you are just using ARA as a client, you need to have the port setting match the port that the modem is connected to, either the modem port or printer port.
