Note: Operation instructions listed in the Help file are meant for keyboard, mouse and PC pad operation. Please refer to "keyboard and Control Pad Operation Instructions" for more about keyboard and pad functions. This game does not support the SEGA Saturn Control Pad or Virtua Stick.

Game Rules

Eliminate the blocks that fall into your playing field. You can obstruct your opponent's game play by dropping blocks into his or her playing field. The player whose playing field completely fills with blocks loses the match.

Animal Blocks and Food Blocks

There are two kinds of blocks: animal blocks and food blocks. Each animal block eats a certain kind of food block. Whenever an animal block comes into contact with its favorite food, the animal block eats the food block.

The animal block eats all similar food blocks that are connected vertically or horizontally. If a food block comes between two or more similar animal blocks, all of those animals will eat the food block. As blocks disappear, the blocks above drop down. Take advantage of this feature to create chain reaction combos that cause blocks to fall in your opponent's playing field.

BB Coins make any block they touch, and all similar blocks on the playing field, disappear. If they fall on two different types of blocks at the same time, both types disappear.

Each time you eliminate three or more blocks in your playing field or start chain reactions, you "attack" your opponent by causing extra blocks to drop into his or her playing field.
