

CH F-16 Combat Stick - Data file for Falcon4

The data file that's titled CHFalcon4.ptw, is based on the schematic in the diagram for the joystick.

Customer's can use this pre-programmed file to setup their joystick/throttle, but they must first go to the CHProducts website, and download the program Speedkeys, for use in WIN95. This program will create a CH Products directory where the data file should go.

This data file is only setup for the Combat Stick, all other CH joysticks/throttles should be setup using the Speedkey Programming tool.

If customers have any problems they can reach CH Products Tech Support at tech@chproducts.com
