REVERSI

The player with the most tokens on the board when the game ends is the winner, the player with the fewest tokens on the board when the game ends is the loser. The game ends when neither player can place a token in a valid position, or if the board is full.

Use the mouse to move your token around the board, press the mouse button to position your token. A valid move positions your token such that it and another of your tokens sandwich at least one of your opponents tokens. When you place down your token, your opponent's tokens between your two token's will reverse colour and become your coloured tokens.

If you cannot position your token in a valid position then you must pass, to pass click on the PASS button.

If you wish to abort the current game press STOP.

If you wish to start a new game press RESTART.
