Displays a list of all users who have personalized settings set up on this computer.

Click this to add a new user to the list of users who have personalized settings on this computer. If this computer has a network selected as the **Primary Network Logon** in Network Neighborhood properties, then any user added to this list must also be on the network.

Removes the selected user and his or her personalized settings from the list.

Creates an entry for a new user, but copies the personalized settings of an existing user. After the entry is created, you can customize the settings for that user. If this computer has a network selected as the **Primary Network Logon** in Network Neighborhood properties, then any user added to this list must also be on the network.

Click this to change the Windows password for the selected user . This is the password that the user must type to log on to the computer. If this computer has a network selected as the **Primary Network Logon** in Network Neighborhood properties, then any user added to this list must also be on the network.

Provides a space for you to type your existing Windows password. For security, asterisks (*) will appear as you type.

Provides a space for you to type the new Windows password that you want to use. For security, asterisks (*) will appear as you type.

Provides a space for you to type your new Windows password again. If what you type matches what you typed in the **New Password** box, the password is changed. For security, asterisks (*) will appear as you type.

Click this to change the settings for the selected user, and then follow the instructions on the screen. When you select an item from the list that appears, a customized copy of that item is saved for this user. When an item on this list is not selected, this user has access only to a shared version of this item.

Specifies that you want Internet Explorer to save separate customized settings for the Desktop folder and the Documents menu for this user. The Desktop folder contains the icons and links that appear on your desktop. The Documents menu is found on the **Start** menu. It contains links to the documents that were most recently opened..

Specifies that you want Internet Explorer to save separate customized settings for the Start Menu folder and for each folder in this user's program group. These folders contain the programs that appear on your **Start** menu and its submenus.

Specifies that you want Internet Explorer to save separate customized settings for the Favorites folder for this user. The Favorites folder contains links to favorite Web sites or to programs and documents on the hard disk.

Specifies that you want Internet Explorer to save separate customized settings for the Temporary Internet Files folder and the Cookies folder for this user. The Temporary Internet Files folder   (sometimes known as the cache) contains Web pages the user has opened previously or which have otherwise been downloaded, so the user can retrieve them quickly or read them when not connected to the Internet. The Cookies folder contains information that Web sites have stored on this computer to identify this user (such as subscription information).

Specifies that you want Internet Explorer to save separate customized settings for the My Documents folder for this user. The icon for this folder appears on the desktop.

Specifies that you want all customized folders created for this user to be created empty. This option saves disk space, and the user can choose what to add to the specific folders.

Specifies that you want all customized folders created for this user to be created containing the same information as the current folders. This option takes up more disk space, but it gives the new user a starting point from which information can be added or removed.
