

Machines Readme Patch V1.1

Date: 5/19/99

This version will give users of the MSN Gaming Zone much more stable connections in game.

Instructions for use:

- 1) Copy the new executable into the Machines directory and overwrite the old file. (machines.exe)
- 2) After you overwrite the file, run the single player game once before attempting a multiplayer game. This will change the version number to 1.1 in the Windows registry.
- 3) Versions 1.1 and 1.0 are compatible, but you will not benefit much from the patch unless all parties are running V1.1. At a later date, the MSN Gaming Zone will force users to upgrade to V1.1 in order to play.
- 4) You are ready to begin playing with the new version.

Note: Microsoft has just released a new version of DirectPlay 6.1a. We recommend upgrading to this version to improve your Internet performance.
