MATCH'EM
Version 1.0

by
*Flat Rabbit Software*TM

MATCH'EM is a simple game of matching sounds to pictures.   It is intended for children from the ages of 1½ years to 4 years of age.   Some younger children may not yet be ready for the game.   If so, wait a few months and try them again.   Some older children may not find the game challenging enough.   If so, trade them in on a younger child.   (Okay, you could try software aimed at older children.)

Notice: MATCH'EM makes use of PC Speaker sound driver software developed by **Arron Wallace. Sounder 3.0** is an important part of MATCH'EM allowing *.WAV to be played through the PC speaker. We no longer have a good address for Arron Wallace.   If anyone out there knows where Arron may be reached, how about letting us know.
