

SpreadPro History

Version 1.04

1. Changed the applications name from XCell to SpreadPro.
2. Due to a clarification of the license agreement for the spreadsheet, chart and spell checker controls, SpreadPro was modified so as not to be a stand-alone spreadsheet application.

Version 1.03

1. Function picker fixed, it was setting the function as text and not an entry.
2. Now allows a sort to be undone.
3. Font name & size is now being displayed when a workbook is opened without having to move cells.
4. If no font size displayed (a range has been selected), and the font is changed then font size is now correctly set to the default font size.
5. Focus is now being returned to workbook after a combo selection from toolbar e.g. Zoom.
6. Added context sensitive menu for objects.
7. Added the following new toolbar buttons: Object - Send to back, Bring to front. Windows - Tile windows, Cascade windows.
8. Improved a number of toolbar bitmaps.

Version 1.02

1. Fixed problem where demo version incorrectly expired on 1st run.

Version 1.01

1. Autoformat fixed, if top left cell of selection was empty, autoformat wasn't being applied.
2. Options screen opens on first page.
3. Tab order corrected in the Show page of the Options screen.
4. Allow toolbars to be docked on the left and right.
5. Removed 'Operation Cancelled' message if print was cancelled.
6. Removed Visit Web Site from Help menu, it's in the About box.
7. Updated menus, now, if floating, hide when XCell is not the active application.
8. Changed evaluation method from limited worksheet size to 30 days.

Version 1.00

Original Version.
