

Welcome to 20,000 Leagues Under the Sea

*

"20000 Leagues" requires that you run Windows in 256 color mode. Failure to do so will result in unpredictable results. If you experience memory problems you may need to create a virtual drive under Windows. Using a virtual drive may reduce the performance characteristics of this product.

If you get a low memory message when starting "20000 Leagues", you may need to quit applications and try again. Looking under "PROGRAM MANAGER" / "HELP" / "ABOUT PROGRAM MANAGER" will give you a good idea of how much memory you have available at any one time. This number should be above 3,000 KB. If you cannot clear enough free memory, please consult your Microsoft Windows users manual on how to create a virtual drive. You should make this drive about 4-5 MEGS in size.

If you get an error message while attempting to view the "Fish" animation, please press "Ignore" twice.

Enjoy!
