

Lucky 7 Help

I. Introduction

Lucky 7 is a trick based game in which the object is to get the most points at the end of the game. The deck consists of 7s, 8s, 9s, 10s, jacks, queens, kings, and aces. Point cards are 10s, kings, and aces.

II. How To Play

To put a card down you click on the card. In certain circumstances you could end the trick early by clicking on the End Trick button. An arrow in the corner shows who won the trick. At the end of a trick, you can draw cards by clicking on the Draw Cards button. At the end of the game click on the Game|New Game menu to start a new game.

III. Rules

The player who starts the trick can put any card down. The next player can try to win the trick by putting down a card of equal value or a seven. In that case it becomes the next player's turn to try to win the trick. Turns can switch eight times (that's when both players run out of cards). If a player fails to put down a card of equal value or a seven, the other player wins the trick. The player who wins the trick starts the next one. (If the trick won, does not have point cards it is not worth anything). The game ends when there are no more cards left in the deck.
