List All Elements..Esc ela

End of [Generic] Commands

This document is an edited form (using Nisus to grep the modifier key substitutions and remove the actual code syntax and definitions) of the Commands file that comes with ConfigUI, which may be found on the `ftp.frame.com` site. This is one of a series of configuration files that allows one to modify the shortcuts and menus of FrameMaker.

I have made it available with absolutely no warranty or guarantee. Use it with the appropriate fear and trembling.

The page format is A4 – US users will have to create their own version for Letter from the MIF that I will eventually create (in January 1995?)

I hope it is useful to Mac Frame users. If you find any errors or omissions (two sins of which I am frequently guilty), let me know: `wilkins@wehi.edu.au`

John Wilkins
