

Welcome to MasterClips MediaPaq Browser version 2.10

This file contains a brief summary of the features contained in this release along with information to help you get started.

MediaPaq Browser is an "image-based" database that allows you to easily collect and organize various types of media into an easily accessible thumbnail referenced Library

MediaPaq Browser Features

Highlights of MediaPaq Browser version 2.10 include:

- SpeedBar Locator
- Background image compression
- Supports raster(bitmapped) graphics.
- Support for PCX, BMP, TIF, Targa, DCX, WPG...and many more!
- Batch Import of files.
- Drag-n-Drop support to other Windows applications.
- Import "preview" of graphic files.
- Thumbnail catalog printing.
- Enhanced JPEG support (8 and 24-bit color).
- Support for Microsoft Video for Windows (.AVI) files.
- Allows sound (.WAV) files to be attached to each image
- Support for Object Linking and Embedding (OLE; as a client)
- File Manager Extension support.

SYSTEM REQUIREMENTS

Windows 3.1, 3.11, and Windows 95

386 computer (or better)

4mb+ RAM (8Mb+ recommended)

Hard Disk

Mouse or other Windows compatible pointing device

Microsoft MCI Video driver (optional)

Microsoft MCI Audio driver (optional)

Autodesk FLI/FLC MCI driver (optional)

Quicktime MOV MCI driver (optional)

SVGA video card (recommended)

INSTALLATION

WINDOWS 3.1/3.11 INSTALLATION

If you haven't already run the installation program, you can do so by selecting RUN from the "Files" pulldown menu in the Program Manager and entering A:\INSTALL (or B:\INSTALL).

WINDOWS 95 INSTALLATION

To run the installation from Windows 95, select the Start button and then select the Run option. Enter in the Open box: A:\INSTALL (or B:\INSTALL).

ADDITIONAL NOTES

Sound File Compression

In the Full Resolution "Show" Window, the option to "Update Sound" under the File menu topic will compress/recompress the attached sound if it has been recorded and/or changed while viewing the image in that mode. The update is then permanently made to that file's entry in the Library.

Saving Permanent Changes to an Image

To save changes made to an image (i.e. Flip, Invert, etc.) into the Library, you should use "Insert as New" feature.

Microsoft Word 7.0 and Drag and Drop Placement

Prior to the release, we found that Masterclips MediaPaq Browser was experiencing a technical difficulty dragging and dropping to Microsoft Word 7.0. If you experience any problems with the drag and drop feature, please do the following. Select the image you would like and double-click on it. Go to the Edit menu and select Copy. Then go to the target application and select the Paste, or Paste from Clipboard feature usually found under the edit menu. For more information, consult the manual or help system of the application which you will be pasting in to.

MasterClips MediaPaq Browser Installation Complete!
