

## About Your Software

- Install Acrobat Reader:** Click this button to install software that will allow you to view files with a 'PDF' extension in their name, (i.e. "Getting started.pdf")
- Load Colorific:** Colorific® allows you to characterize the colors on your monitor and enables accurate, predictable color matching between screen and printer. When coupled with some newer video boards, Colorific also provides a control panel to optimize the color balance of your display for your applications.
- Colorific creates data files called "Profiles" in the International Color Consortium (ICC) format. These profiles can be used with applications to author documents for True Internet Color(TM). After you install the Pantone Plug-in for True Internet Color, your web browser can accurately display color documents that are posted in the True Internet Color ICC format.
- Getting Started:** View this .PDF document (using the Acrobat Reader listed above) for more information about Photodisc products.
- ImageSizer:** This tool will assist you to calculate changes in resolution when sizing and scaling your designs.
- Extras:** A PhotoDisc source profile, Pantone web plug-ins, and a link to a color section on our site are available in this directory.

For trouble shooting and information about other PhotoDisc products, click on the Getting Started button. Look in the PDF file for more information.
