# Chapter 1

## Others

### 1.1 Welcome

Other programs

Deutsch

I have written some other little ARexx-programs for Wordworth. Some people will write these things for themselves, but maybe they are of help for some of you. I haven't translated all of them, sorry.

WW-Fontlist

- List of all fonts you have installed for Wordworth

WW-Print

- Print several documents one after another

WW-Farben

- Overview over the colours of WW

WW-Labels

- Print labels etc.

WW-Circles

- concentric circles (if anybody needs that)

WW-FKeys

- Overview over F-Keys in WW (WW-Document)

Bibel

- Complex viewing program for bible texts. Should be possible to use it for other long texts, too. Needs GoldEd and Muchmore.

Author  
- Contact me!

## 1.2 Author

Author

Heiko Kuschel  
Lehmgrubenweg 13  
97280 Remlingen  
Germany

<hk0006@wuerzburg.baynet.de>

## 1.3 Fontlist

WW-Fontlist

This program makes a list of all fonts installed for Wordworth 6. (Version 5 ↔ should be possible.)

Aminet: util/rexx/WW-Fontlist.lha

## 1.4 Druck

WW-Print

Print several documents one after another automatically. Wordworth 5 and 6.

Aminet: util/rexx/WW-Print.lha

## 1.5 Farben

WW-Farben

Overview over the pre-defined colours of WW. (WW 3.0.-Document and ARexx-Script ↔ )

As the colours are named in German, I don't know how WW will react if you load it with the English version. Maybe you have to work on it a bit. Please tell me ↔ !

Aminet: docs/misc/WW-Farben.lha

---

## 1.6 Labels

WW-Labels

As many text frames on a page as you like. Wordworth 5 and 6. So you can print ↔  
labels etc.

All parameters can be set; if you contact me, I will make a more comfortable ↔  
version.

(Only then!)

Aminet: util/rexx/WW-Labels.lha

## 1.7 Kreise

WW-Circles

Makes circles with the same centre. Wordworth 5 and 6.

Aminet: util/rexx/WW-Circles.lha

## 1.8 FKeys

WW-FKeys

Overview over the F-Keys of Wordworth. Print it, cut it out and put it around ↔  
your F-Keys.

Apt for Amiga 1200. Wordworth 3.0.-document.

Sorry, you have to translate it first; I don't know the English words for all ↔  
these things.

Aminet: docs/misc/WW-Fkeys.lha

## 1.9 Bibel

Bibel

Program that shows bible text in seconds and puts them in the clipboard.

Needs:

- Bibletext in ASCII
- Golded 4
- Muchmore

Should be possible to adapt it for other long texts, e.g. laws.

It works, but isn't ready yet, German only, contact  
me  
if you are interested.
