## 1.17 Directory selection help

You are looking at the directory sorted version of the new files [↔](#)  
list.

New files means everything that was uploaded since the previous Aminet CD was made. Every directory is one page. Just click the directory and subdirectory you would like to see.

---

Help on the format of the file lists, and on what will happen when you click the archive name or description, is available [here](#).

You can also do a search from this page. Matches will be sorted by directory.

Click 'Retrace' to get back.

## 1.18 File view help

Every line in the index format shows the following items:

**File**            The name of the archive. An archive is several files compressed and joined into one big file; see the LhA documentation in Tools/Docs if you are interested. Clicking the file name will extract it to RAM: or wherever selected.

**Dir**            The directory inside 'Aminet' where you'll find the named file.

**Size**           The size in K (1024 Bytes) or M (about 1 million bytes).

**Age**            The age of the file in weeks at the time the index was created.

**C**              (Where present) The CD the file can be found on. Note that uppercase letters (ABCD) mean Set 1, and lowercase (abcd) refer to Set 2. Blank means current CD.

**Description**   The short description of the file. If you click it, you'll see a longer description. A + sign in front of the description says that the longer description contains more than just the header lines. A \* sign in front of the description says that the file is not on the current CD. Clicking it anyway will tell you what CD it can be found on.

Click 'Retrace' to get back.
