Since Image Integrator is a way to make Fetch catalogs easily accessible from QuarkXPress, the XTension offers a way to activate Aldus Fetch from within QuarkXPress to save the user time. To activate Fetch, choose Open Fetch from the Image Integrator palette's File menu.   (Note: this is System 7 only. The algorithm for determing whether to launch Aldus Fetch 1.0 or Aldus Fetch 1.2 is that Image Integrater launches 1.2 by default but if   1.0 is already open it switches to it.)
