CorelDRAW Take a closer look at the world's best-selling graphics software! CorelDRAW is a vector-based drawing program that provides powerful, easy-to-use illustration tools, extensive DTP features, dazzling text handling and special effects. Create your own graphics using PowerLines, fractal textures and rainbow blends, or choose from over 22,000 clipart and symbol images. Create newsletters, brochures and presentations -- CorelDRAW imports text from your favorite word processor and automatically generates new text frames and pages to fit. Need a little help with a brochure? Extensive libraries of professionally-designed templates make layouts quick and easy. And CorelDRAW's new Color Manager lets you calibrate your monitor, scanner, and printer to achieve more accurate representation of colors used in your drawings.

CorelVENTURA Manage large documents more easily and efficiently than ever before using CorelVENTURA's simplified menu structure and user interface. Select and manipulate objects with ease using the built-in mode-switching intelligence. Use the Cross Reference and Index Roll-Ups to quickly access frequently-used controls, and the Character Roll-Up to easily select characters not directly accessible from the keyboard. CorelVENTURA supports the standard Windows text editing conventions and the full ANSI character set, making it a snap to learn and use. Large-scale editing is a breeze with the built-in story editor. Create professional-quality color separations, wrap text around irregularly-shaped objects, rotate text and graphics in 0.1-degree increments, apply CorelDRAW fills and outlines to objects...and more!

CorelQUERY Use this powerful tool to extract database information for use directly in CorelVENTURA or CorelCHART. View files from database application files which use Microsoft's Open Database Connectivity (ODBC), such as dBASE, Paradox, FoxPro, and SQL Server. Browse through data tables viewing the structure and contents, sort data, or copy all or a portion of the data into your document and establish links to it. You need not own a database program to view files -- all you need is a third-party database file.

TagWrite Use TagWrite to transfer CorelVENTURA documents to and from other document processing formats like Word 6, WordPerfect 6, and **SGML**, while retaining a most of your high-level text formats. For example, TagWrite converts the formatting codes in a Word document into equivalent codes that CorelVENTURA recognizes. Retain complex information such as font, color, spacing, and justification.

CorelKERN Permanently modify the kerning of any Adobe Type 1 font interactively on your system using this powerful kerning utility.

Corel DATABASE EDITOR Create and edit records in Paradox databases with ease! With Corel DATABASE EDITOR, you don't need a fully-featured database package to edit Paradox files.

CorelCHART Add flair to your report with a visual representation of your data! CorelCHART is a superior charting program with all the ease of use and power of CorelDRAW. Create eye-catching charts in minutes using the wide selection of templates provided and all the fill options available in CorelDRAW. The Data Manager eliminates the need for a separate spreadsheet -- perform calculations directly within CorelCHART, choosing from hundreds of mathematical and financial functions.

CorelPHOTO-PAINT Unleash your artistic potential! CorelPHOTO-PAINT is a bitmap-based photo-editing and illustration package that lets you mimic the styles of Van Gogh or Seurat, paint on textured canvasses and add special effects to your photos. Scan in photographs for use in newsletters or brochures directly from CorelPHOTO-PAINT, or create your own graphics with tools such as fountain pen, paint can, airbrush, smudge and brighten.

CorelMOVE Set your imagination in motion! CorelMOVE is a fun, 2D animation program that adds humor and variety to your presentations. Assemble your own animations easily by choosing from over 1,000 animated actors, props and sounds -- place them on a page, add a point-and-click path and sit back to watch the fun! Or, create new actors using the familiar CorelDRAW tools. Use the new morphing feature to blend one image into another. CorelMOVE puts you in the director's chair!

CorelSHOW Wow your peers at the next corporate meeting! CorelSHOW is a multimedia presentation module that allows you to build a slideshow, choose transitions and add multimedia effects such as animations and sound. Create your slides using the extensive libraries of background designs, 3D animations and bullet styles. Include industry-standard video format such as QuickTime for Windows and Microsoft AVI, as well as AutoDesk Flics and CorelMOVE animations. Create handy speaker notes containing a small slide image and notes for the speaker. CorelSHOW is the tool of choice for creating lively, interactive presentations and demonstrations.

CorelTRACE Convert your bitmap files to editable vector artwork! CorelTRACE is a complete document conversion utility. From image acquisition to accurate tracing, CorelTRACE does it all. Scan directly from within CorelTRACE, trace your image or use state-of-the-art OCR algorithms to convert scanned text to editable text.

CorelMOSAIC Manage your files visually! CorelMOSAIC is a powerful file manager and batch processing utility. Using small thumbnail images of your files, CorelMOSAIC helps you locate, organize and index your files. You can also use the library function to archive files and save valuable hard-drive space.

Extraordinary Value! Each package of CorelDRAW includes two CD-ROMs filled with extras!

- Try the multimedia QuickTour -- an interactive tutorial which describes the features of CorelDRAW using animations, music and practical examples.
- Choose from over 825 fonts.
- Add visual impact to your report with one of over 22,000 clipart and symbols created by some of the best professional clipart artists in the world.
- Create your own animations by choosing from our libraries of over 1000 actors, props and sounds.
