ERRPROBLEM,C,254
An alias name must begin with a letter and may contain letters, numbers, and the underscore (_) character.
The alias defined in "sx_Use" has already been assigned to a different work area.
Maximum length of an allias name is 63 characters. The first ten characters must be unique.
Two fields with the same name in the source and target files are not the same type. The operation cannot proceed.
There are no matching field names between the source and the target file.
The memo field passed to "sxGetBitmap" doesn't hold a bitmap
An error has occured while attempting to create the new database.
"sx_Use" cannot open the defined database as a dbf.
If using a compound index driver (CDX/NSX), "sx_IndexTag", "sx_Pack", and "sx_Reindex" all require that the Dbf be ope
Only one instance of "sx_FilterDlg" is allowed.
"sx_IndexOpen" does not recognize the index format.
"sx_Use" does not recognize the memo format. The SDENTX RDE supports DBT memos, the SDEFDX RDE supports FI
"sx_CreateField" has been called while the current work area is pointing to a valid database.
"sx_CreateField" has been called more times for the new database than the number of fields defined by "sx_CreateNew".
The new database defined by "sx_CreateNew" must have at least one field specified.
A field name must begin with a letter and may contain letters, numbers, and the underscore (_) character. Maximum lengt
"sx_CreateField" has already processed a field with the defined name. Duplicate names are not allowed .
A function requiring a vallid field name cannot find the passed name in the field definition array attached to the current wo
The physical creation of the file on disk has failed. Out of disk space? File Sharing error?
An error has occurred while attempting to lock the file or record.
The file cannot be opened. Is the name correct? Has a sharing violation occured?
Use the SDE2 API defined constants to specify file open mode.
A write operation has been attempted on a file opened in READONLY mode.
A physical read error has occurred.
A physical seek error has occurred.
A seek error has occurred while because DOS reports the file as having a length of zero bytes.
An error has occurred while attempting to unlock the file.
A physical write error has occurred. Out of disk space? Sharing violation?
An attempt has been made to write to a record location in the database that does not exist.
An attempt has been made to define a relationship to a child file whose work area invalid.
Use the SDE2 API defined constants to specify data type to "sx_Replace".
Dates must be formatted according to the mask specified by "sx_DateFormat".
A file may have been deleted without formally issuing a close instruction through SDE2.
FPT/SMT memo block sizes must be a power of 2 with a rangw of 16 to 1024.
Maximum record length under Windows is the maximum number allowed in a signed integer (32,767).
The function requiring a record number has encountered a number greater than the number of records in the file.
A parameter declared "As Any" is invalid. These parameters are usually described "As Any" in the Visual Basic declaratio
Referenced work area is not attached to an open database.
An attempt has been made to continue a locate operation without ever starting it (sx_Locate).
An attempt has been made to open more than 250 data files in the current task.
No more than 24 concurren SDE2 tasks may be open at a single workstation.
The defined memo field cannot be found.
Textual memo strings cannot exceed 65,534 characters.
An error has occurred while attempting to allocate memory to hold a memo.
A physical write error has occurred while attempting to save a memo. Out of disk space? Sharing violation?
"sx_MemAlloc" has failed. Out of memory?
An internal memory allocation via a Windows API call intended to supply working memory has failed.
"sx_MemDealloc" has failed. Is the address still valid?
The index file close routine has failed.
A physical disk read error has occurred while attempting to read the index file.
A physical disk read error has occurred while attempting to read the index header.
The index has been physically corrupted. Use "sx_Reindex" or use "sx_Index" to repair.

When an index key is inserted, the old key must be deleted first. This function has failed. The most likely cause of the failu
The index key expression results in a key length or type that differs from the keys actually residing in the index.
When an index key is inserted, the old key must be deleted first. This function has failed. The most likely cause of the failu
SIXNTX key length maximum is 328 characters. SIXFOX and SIXNSX key length maximum is 240 characters.
The index has been physically corrupted. Use "sx_Reindex" or "sx_Index" to repair.
The index has been physically corrupted. Use "sx_Reindex" or "sx_Index" to repair.
The index has been physically corrupted. Use "sx_Reindex" or "sx_Index" to repair.
The index has been physically corrupted. Use "sx_Reindex" or "sx_Index" to repair.
The index has been physically corrupted. Use "sx_Reindex" or "sx_Index" to repair.
The index has been physically corrupted. Use "sx_Rindex" or "sx_Index" to repair.
The index has been physically corrupted. Use "sx_Rindex" or "sx_Index" to repair.
The index has been physically corrupted. Use "sx_Rindex" or "sx_Index" to repair.
Valid order select areas are returned from "sx_IndexOpen" when the index is opened or from "sx_Index" when the index is
Not enough memory to complete the index build operation. Try a shorter key value.
An error has occurred while attempting to load the RDE defined via "sx_Use".
The RDE specified in sx_Use cannot be found. It must be in your path and is usually loaded in the WINDOWS\SYSTEM d
Use SDE2 API defined constants to specify the RDE type.
An attempt has been made to perform an operation on two databases that requires databases of the same type.
Self explanatory.
A SDE2 function that is only available in the Pro edition has been called when using the standard edition RDE.
An attempt has been made to write to a record that is locked by another user.
Not all xBase functions supported by the various dialects are supported by the SDE2 expression parser. Either the reques
An invalid alias name has been used to qualify a field name in an xBase expression.
The length of the result of an xBase expression compilation exceeds the internal size allocated (2048 bytes).
An xBase function has been passed an incorrect number of parameters. Check the expression syntax.
Mixed types are not supported. For exammple, both TRUE and FALSE results contained in an IF() expression must be of
Generic error. Something has gone wrong during the evaluation of the expression.
Syntax error. For example, a logical operator does not have expressions on both sides.
Too many parameters have been passed as input to an xBase function.
Mismatched parentheses or quotation marks within the expression.
An unknown operator has been detected in the expression.
The passed date string is invalid.
The parser could not identify one of the elements in the xBase expression.
Mismatched parentheses or quotation marks within the expression.
Mismatched parentheses or quotation marks within the expression.
Mixed types are not supported. For example, both TRUE and FALSE results contained in an IF() expression must be of th
A SDE2 function requiring an xBase expression that will return a TRUE or FALSE result has been passed a function that

A physical read error in the index header has occurred.
A physical read error in the index page has occurred.
A physical read error in th attached memo file has occured.
A key expression that has a null value has been passed to one of the internal index functions.
Self explanatory.
