[MemoryAnalyst](#)

Special Thanks to

Manuel Guesdon from Software Builders, a Windows Developer, for his time testing TimeWizard and providing us with wise advices. Without him, TimeWizard would still be at its beta-release status.

His E-Mail address is : mguesdo@worldnet.fr;

Armelle Mangin, for encouraging us developing great shareware programs.

What is TimeWizard?

We developed TimeWizard (TW) to allow users to track the time they spend on their computer doing things. TimeWizard is especially interesting for:

- Independant Contractors,
- lawyers,
- programmers,
- managers,
- and all the people who use their computer on their workplace.

TimeWizard will keep track of what you are doing during the week and help you see what you really spend time on.

Many reports (lists, pie chart, Gantt chart) will enable you to study what tasks are time-consuming and what tasks aren't.

With TimeWizard, you can export your data to a spreadsheet application, a database application or other applications. Managers will even be able to compile a multi-users report compounded of the working time-frames of their employees.

TimeWizard is a productivity tool from Executive Partners Software, a shareware-based business.

We hope you will share our enthusiasm about this program and support the ShareWare programmers by registering it.

How to use TimeWizard?

When you start TimeWizard, the first thing you will have to do is create a new file. A TimeWizard file is a set of projects and time-frames associated with them.

If you are an independant contractor or anyone that will bill the time you spent working on your computer, you can use the customers database in your TimeWizard file and periodically print an invoice.

The last step consists of creating the set of projects you work on to later associate a time-frame to one of your projects.

Now that your file is setup, just use the 'Check In' command in the menu or press the button:

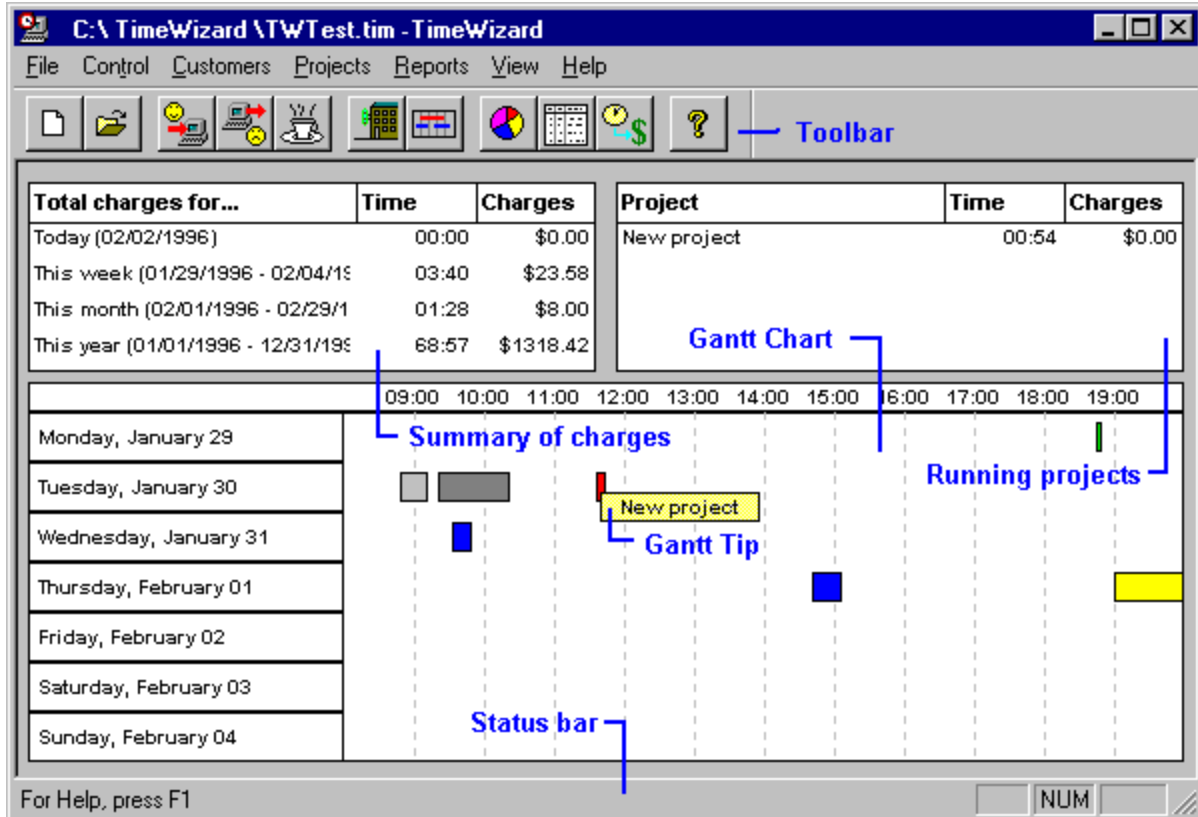

to start timing a project.

When you are done working on that project, press the 'Check Out' button:

TimeWizard's screen description

Following is a commented screen shot of TimeWizard:

TimeWizard's tip

Reducing the size of TimeWizard's main window will make the Gantt Chart disappear.

Right-click in the Gantt's Chart allows to:

- change the startint/ending hours of the chart,
- change the week being viewed,
- show this screen.

If you right-click on a Gantt's Chart item, you can also:

- update the item (date, starting hour and duration),
- delete the item.

MemoryAnalyst for Win95

Look on Compuserve (GO MSWIN95, Library General Uploads) and other online services for our award winning shareware "MemoryAnalyst".

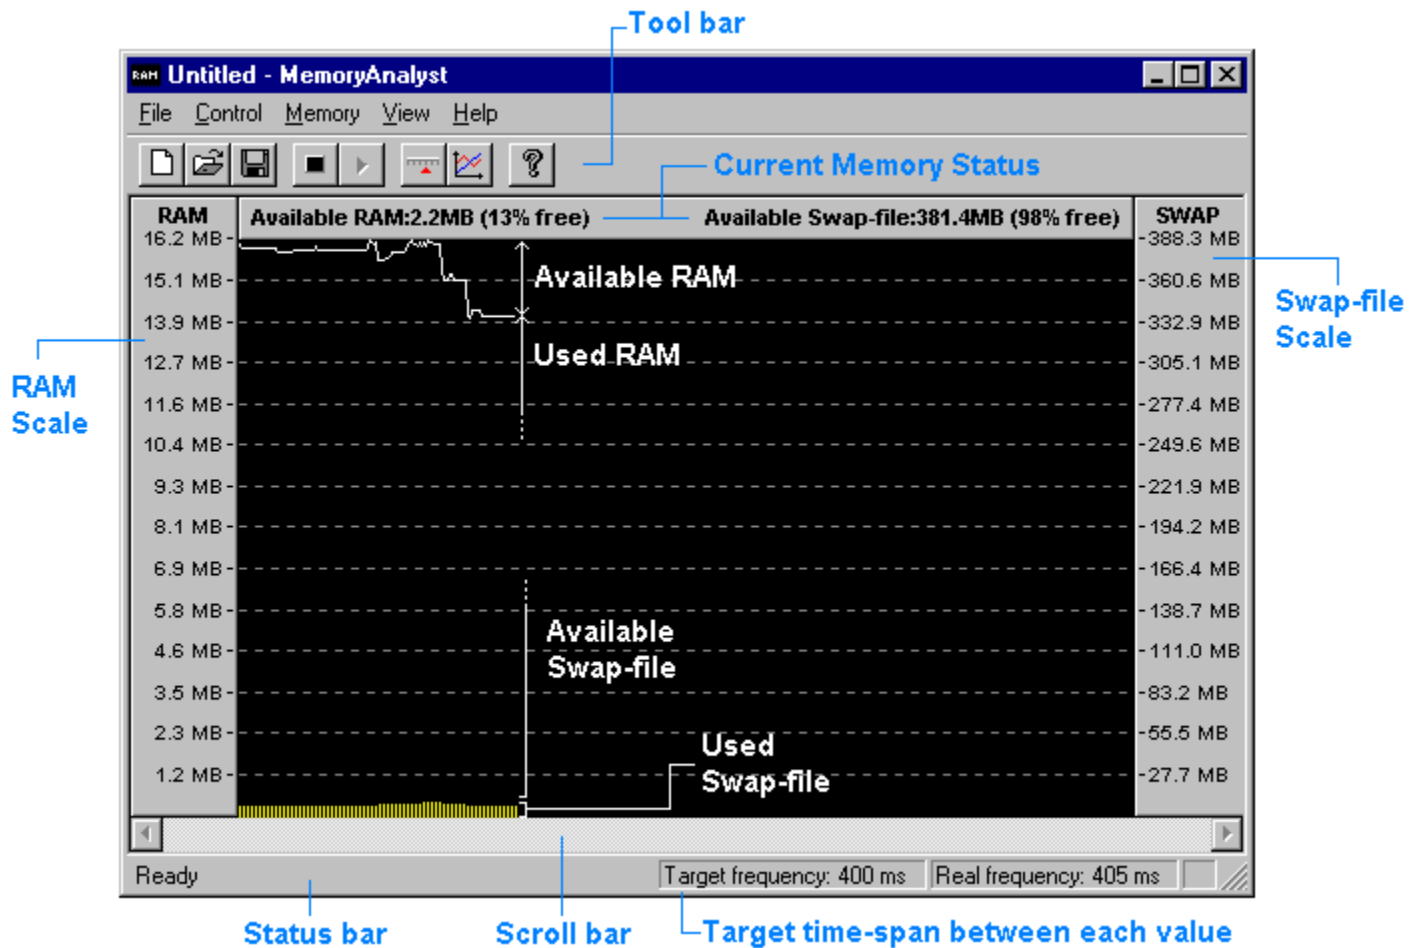

MemoryAnalyst has been designed to help understanding how Windows 95 manages its memory.

Once loaded, MemoryAnalyst graphs Virtual Memory and Physical Memory in real-time. Open and close other applications while MemoryAnalyst is running and see how it affects your system's memory.

MemoryAnalyst includes the following features:

- Comprehensive Help File,
- Properties (Appearance and Execution),
- Open/Save file,
- Analysis of data,
- and more...

The Analysis is particularly important since it basically tells you how much RAM would be necessary on your system for smooth response from your applications.

File menu

New

The 'New' command creates a new TimeWizard file. Each TimeWizard file is a different workspace with different projects, customers, ... Most users need only one TimeWizard file to work with.

Open

The 'Open' command just opens a TimeWizard file. Once you have opened a file, TimeWizard will remember it and will automatically reopen that file the next time you use TimeWizard. The 'Open' command is very useful if you work in team and want to access someone else's file across the network or on a floppy disk.

Export

The 'Export' command is typically designed to allow an other application (like Microsoft Excel, Microsoft Word, MS-Access, ...) to read TimeWizard files. The field separator used is the <TAB> (ASCII 9) character. The record separator used is the <CR><LF> (ASCII 13,10) characters sequence.

Properties

The 'Properties' command allows to change the application's user address, the invoicing parameters (including sales tax rate) and other parameters (such as the monetary symbol and the date format).

Print Gantt Chart

The 'Print Gantt Chart' command sends to the printer what you have on screen. In addition to the Gantt Chart, a projects legend will appear on the right of your page.

Print Setup

The 'Print Setup' command allows to change the printer parameters such as paper orientation, page size, ...

Exit

Bye, bye...
Closes TimeWizard.

Control menu

The control menu consists of 3 items:

Check In

The 'Check In' command will present you a dialog in which you will choose the project you want to start working on (if you don't have any project setup yet, see our [Projects](#) section).

Once you have checked in a project, it will appear in the "Running Projects" window (top-right part of the screen) with indicators of the time already spent and the money charged to the associated customer if any.

You will also notice that the two other Control-commands (Check Out and Pause) are now available (see below for details).

Check Out

The 'Check Out' command closes a working session on a project that is being timed. The time you spent working on a project will only appear in your reports (summary of charges, Gantt Chart, Projects Pie, ...) at the moment you check out from it.

Pause

Leaving the office for a coffee, lunch or to play your favorite computer-game... Press the 'Pause' button and TimeWizard will know you are out. When you return working on your project, just press 'Pause' again and TimeWizard will resume timing your work.

TimeWizard's Tips :

There are 2 other ways to access the Control-commands : the check in, check out and pause commands are also available as buttons in the toolbar. For convenience, since TimeWizard will be minimized (present in the taskbar only), you can call the system menu by right-clicking TimeWizard's icon in the taskbar and directly access the Control-commands.

With TimeWizard, it is possible to check in up to five different projects at the same time. This is especially useful if you work on something generic and want it to be billed to many customers at the same time (not very ethical... but after all, we were born with two hands, two legs, two eyes and a multi-tasking brain, isn't it?)

Customers menu

Edit Customers

This command allows to add, update or delete customers. If you don't use the invoicing capabilities, you won't need to create customers.

Projects menu

Edit Projects

This command allows to add, update or delete projects. a right-click in the projects window will prompt a popup-menu with the options of creating a new project or sub-project. If you right-click on a project, the popup-menu will contain contextual commands (update/delete project). Sub-projects are only a visual manner of organizing your projects.

Projects Pie Chart

Graphically show the weight of each project in you overall working period. You may change the graphed period to any time-frame. Move your mouse on the pie to see a bubble indicating the project's name and according time spent working on it.

TimeWizard's Tip :

In the projects window, you can use the drag and drop capability to change the order of your projects in the list.

Reports menu

Edit Projects

This command allows to add, update or delete projects. a right-click in the projects window will prompt a popup-menu with the options of creating a new project or sub-project. If you right-click on a project, the popup-menu will contain contextual commands (update/delete project). Sub-projects are only a visual manner of organizing your projects.

Projects Pie Chart

Graphically show the weight of each project in you overall working period. You may change the graphed period to any time-frame. Move your mouse on the pie to see a bubble indicating the project's name and according time spent working on it.

TimeWizard's Tip :

In the projects window, you can use the drag and drop capability to change the order of your projects in the list.

How to register?

TimeWizard® 1.0

Credit Card Registration (MasterCard, Visa, American Express, and Discover): you can use the PsL Credit Card Registration service: [Order by Credit Card](#).

CompuServe Registration: To have the registration fee added to your CompuServe bill use the CompuServe command GO SWREG and follow the menus. TimeWizard95's registration ID is 10122.
\$24.95 will be added to your next Compuserve invoice.

Ordering by check: To order by check, send this [order form](#) and a check to B. D'Andrea. Payment must be in US dollars drawn on a US bank, or you can send international postal money orders in US dollars (see our address in this Help file [Contents](#)).

When you register: you will be sent a registration key that removes the UNREGISTERED message and also removes the 30 days trial period lock. We will keep you informed of new versions as well as our other upcoming exciting products. Comments are welcome. Registration keys will be sent by E-MAIL if you provide one, otherwise by regular mail.
The EP Soft team thanks you for your support.

FRANCE residents: To order by check, send this [order form](#) and a check to EP SOFT of 129FF drawn on a French bank (see our address in this Help file [Contents](#)).

Customized version of TimeWizard: if you like TimeWizard but would like to have some enhancements to accommodate your company (additional reports, custom export format, new features, ...), E-mail us the desired changes and we will reply to you with a cost estimation.
