

About Active Tune

McAfee Active Tune is a new feature of McAfee Utilities that reduces drive fragmentation in real-time. It makes use of patent-pending technology that directs Windows to intelligently write files to the drive to prevent fragmentation.

To use Active Tune, click Options >Settings in the McAfee Utilities home screen; or right-click the McAfee Guardian icon from the Windows task bar; then select Properties. The McAfee Utilities Properties dialog box is displayed.

To enable Active Tune:

1. Click the Active Tune tab in the McAfee Utilities Properties dialog box.
2. Check Enable McAfee Active Tune.
3. Select the drive you want Active Tune to work on.
4. Click Apply when finished.

Active Tune can be enable or disabled using any combination of hard drives or partitions on your computer system.

TIP: Use McAfee DiskTune to defragment your drive prior to using Active Tune regularly.
