Welcome to Disklog for Windows

Disklog can help you keep track of all your floppies lying around. If
after you use Disklog your're feeling motivated you can always
contribute $10 to the address on the main menu. Other than that enjoy!

Special Thanks
A special thank you to the authors of gen.dll and tbksort.dll

Operation
Disklog is pretty straight forward. Everything is icon driven, you'll
notice the mouse cursor change when you are over an active button.
There are four screens:

> *Main*
>> Used to enter log/reports & edit/browse

> *Log/Reports*
>> Log an entire disk into Disklog
>> Print three types of reports

> *Edit/Browse*
>> Enter a single new record
>> Edit an existing record
>> Goto an existing record
>> Browse throught records
>> Delete a record by name
>> Delete a series of records associated with diskname

> *Record*
>> Contains a page for every filename

Disk Label printing will be added later, fonts for reports are standard
so that there are no problems over printer support. Run-time Toolbook
is required and should be in your path. You need to have the included
DLL's in the same directory as Disklog.

Thank you for using Disklog
