Mah Shell
Version 4.0
Steve Shattuck

Mah Shell is a tile set manager for Nels Anderson's Mah Jongg program, MAHJONGG.EXE.   Mah Shell can display up to 500 tile sets for selection to play.   In addition, Mah Shell remembers your Mah Jongg parameter preferences.   These include display of the Mah Jongg title page, use of a mouse, playing timed games, background and mouse cursor colors, and the Y/N prompt after selecting a tile pair. Mah Shell observes all the standard Windows conventions.

Registered user can compress their tile sets using PKWare's PKZIP/PKUNZIP programs.   This feature typically results in an 80% reduction in the disk space required to store your tile sets.   **You may register Mah Shell** by sending **$15 dollars** to the address listed below: .

A tile set is selected by clicking on its name.   The currently selected tile set is indicated by italics.   A double click starts Mah Jongg immediately

If you find any bugs in Mah Shell, or wish to make comments or suggestions, please write!   You can reach me on EXEC PC [(414) 789-4210] or write me at:
