

## **No Control D program**

version 1.0  
September 1991

### **Short Description**

When you send Postscript printer output to a file the printer driver places a ^D at the beginning of the file. When you later print this file on some networked printers, the ^D causes printing to abort. Since this is at the beginning of the file, no pages are printed. This program removes the ^D from the beginning of Postscript output files.

### **Packing List**

The following files should have been included in the ZIP file:

- NODEE.EXE - the program
- NODEE.HLP - a Windows Help format file
- NODEE.WRI - the ZIP packing list
- SOURCE.ZIP - the complete C++ source code ( for the curious)

### **Getting Started**

To use this program, place the .EXE file in any directory, and the .HLP file somewhere on your PATH.

All the documentation for this program is included in the help file. This file is a Windows format Help file. You can view the help file from the program by selecting Help/Manual from the Help menu. The first time you run the program, the Help program will be run.
