

@loha - Free version

Product Release Notes

(Note: This version only has 10% of the power of the complete @loha)

1.0 Introduction

Welcome to **@loha!!**

This is the Read Me File for @loha Free version for Windows 95. This file provides tips and describes known problems and suggests possible solutions. If you experience a problem with @loha, you should read this file closely, as well the on-line Help system. When you are finished reading this file, select Exit from the File menu.

2.0 Sending Your @loha Message

@loha messages are sent like any attachment in E-mail. After you include an @loha player with your animation, your current E-mail package takes over. There are detailed documentations on how to send @loha animations with various E-mail programs. However if problems persists, please contact your Email package's technical support staff on how to send attachments.

3.0 Some Known Problems

- a) When changing the color of the text in the Edit text dialog box, some colors may not match what you have chosen. Simply click OK. It should correct itself once you come back to the Workstage. The text on your work stage and animation will have the correct color. This little problem only occurs in the Edit Text box.

4.0 Special Note on Text

- a) After adding an effect to the text, you can opt to animate every letter of the text by selecting "Apply path to individual characters".

5.0 Sending your @loha Message

- a) Click on the SEND MAIL icon (top of screen). This only works for Eudora and other MAPI compatible email programs such as MS Mail and MS Exchange. If you do not have a compatible email system, please save the animation and import it to your email program as a regular attachment file.
- b) This will call up your existing e-mail package.
- c) You must send the animations with a player for the first time to your friends. After that, select "NO" when asked to include a player with your message
- d) Please see How to ... Send Greetings via E-mail section and the Frequently Asked Questions in @loha Help file

6.0 Support

We only support registered users. We do not support Free @loha via telephone. Please contact us by E-mail.

Email Support: support@mediasyn.com
