Here are all the cheats I have for the Lynx. Please e-mail any corrections, suggestions, more cheats, and whatever to: tazzzzz@eecs.umich.edu.

Last updated: January 27, 1993

- New list maintainer information
- Crystal Mines II level and bonus codes. Level skipper
- Dracula the Undead solve
- Shadow of the Beast solve
- A.P.B. Cheat
- Batman Invincibility
- Toki Secret Screens
- QIX level codes (mostly there, at least)

These are from the Lynx FAQ from rec.games.video on Usenet, Portable Addiction, Howard Chu, Jaime Villacorte, Dan Hollis, Jonathan Haas, Ken Small, Bobby Tribble, Peter Kaminski, Johanne Kaminski, Jocelito Carpio, Dionicio Lazo, Jason Bennett and probably a bunch of others. THANKS! Lotsa thanks to Robert Jung. Finally, thanks to Damian Gick who would probably still be keeping this list up to date if he hadn't lost his net access.

Kevin (Tazzzzz) Dangoor

A.P.B.

When your quota is met, hold down OPT 1 and OPT 2 when you touch the Officer Bob parking space. This will warp you to level 99. (The game will not end, just repeat level 99 with random quotas.) Hold down Option 1 and Option 2 while getting a donut to skip the level.

AWESOME GOLF

Entering LANDLORD as your name will make the OPT 2 button swing at the ball and when the ball is in the air OPT 2 will sink the ball!

BASKETBRAWL

Put in MJ?? to play with a partner, supposedly Jordan. Replace the ?? with any two numbers. Pause, hold down Option 1 and press Option 2. You can change the pause message to anything you want! (from Star*Lynx BBS)

Level codes

Level 1-1 AAAA	Level 3-3 IIII
Level 1-2 BBBB	Level 4-1 JJJJ
Level 1-3 CCCC	Level 4-2 KKKK
Level 2-1 DDDD	Level 4-3 LLLL
Level 2-2 EEEE	Level 5-1 MMMM
Level 2-3 FFFF	Level 5-2 NNNN
Level 3-1 GGGG	Level 5-3 OOOO
Level 3-2 HHHH	

Taken from January 1993 EGM (Edward Mann). Someone at Atari is very imaginative.

BATMAN RETURNS

From Video Games and Computer Entertainment, you can make Batman invincible with the following steps at the title screen (the one with the Batlogo): press up 8 times, down 12 times, left 15 times, right 19 times and option 1 27 times, press A or B to start the game. Once the action starts, press pause. The use option 1 to skip to the next level, option 2 to make Batman invincible! Falling can still kill you, however.

BILL AND TED'S EXCELLENT ADVENTURE

(Solve) : From Portable Addiction Electronic Magazine

First of all, collect all the notes you can get and find the gold nugget. Now go to the guarded building and give the nugget to the guard. Enter and find the man that tells you about the staff. Return to the telephone booth and travel to 1500 BC. Use the scare stone. Find all the notes you can get (remember to count by sixteens!). Enter the valley and find the paper note about the fake staff. Travel back in time and put the note at the pillar. Go to the South-East of Egypt and find the royal ankh (You must wade through shallow water). Travel to 1500 again and find the boat at the South-West part of Egypt. Use the royal ankh. Find your way thru the water (it's like an invisible maze). First go to the place where you found the ankh in 1700 BC. Enter the temple and find the secret passage which leads to the harp. Return to your boat and go to the pyramid. Go into the pyramid and open the door by walking over the red spots on the ground. Then, when past the wall/door, walk over the four other red spots and take the staff. Find the two keys and open the corresponding doors. To get rid of the two creatures guarding the room, just lure them out of there and then run away. When you return to the room they will be gone. To take the staff, use the harp. Return the staff to the man to get the flute. Use this flute in 1700 BC at the North-East to scare the animals over there. Then find all the notes that are hidden under the trees to find a phonebook-page. Travel to Rome.

First, enter the dungeon. Find all the notes and the two keys: Blue and black. Remember to visit Caesar at the north of the arena when you have enough notes. Outside the arena you must once again find notes. When you think you have all of them, go to the statue. Push the four pieces around the statue in place and then push the statue. Now do this again and then go stand in the middle yourself. After you get launched, find all the notes around the house, but don't enter it. When you got all the notes, walk into a roman to get kicked out of the garden. You are now outside. Go West, to where a roman is guarding the entrance of the city. Now go down and find your way through the forest. Somewhere in the forest there is the next page of the phonebook. You must collect all the notes in the forest and you must also find the little building. Enter it and find the way through the maze until you find an apple. Leave the building and go to the guard. Give him the apple and enter the city. If everything is right you now have 80 notes. Travel to Europe.

In Europe, enter the mansion. To avoid the furniture, stay on the green dots on the floor. This may take some practise! Find the white key and then find your way to the backyard. Use the black key to open the gate. Go to the North-West of the screen to find a red key. Use it to enter the small house nearby. Avoid dracula and take the magic wand next to his coffin. Return to the mansion and find the organ. Use the wand to shrink it down so you can carry it. Return to the phonebooth (The wand causes the furniture to stop). Travel back to Rome. Do the trick with the statue and this time enter the house while using the organ pipes. You can now safely walk thru the house to the backyard to take the lyre. Return the lyre to Ceasar and you will get another lyre. Enter the dungeon and use the lyre to scare away the lion that guards the white lock. Use the white key to open the lock and take the page of the phonebook.

Travel to Rome 70 BC and enter the dungeon. Use the black key and put it back where you found it (Bottom-right). Now travel to Texas. Collect all the notes you can get. Somewhere, hidden under a skull, there's a golden coin. Go to the station and buy a ticket. Walk to the train and use the ticket. Now use the train to find the remaining notes. You must also find the golden nugget, hidden under yet another skull. Travel back to Egypt and replace the golden nugget at the place where you first found it. Now travel to San Dimas 2691 AD! Yeah, most radical, dude!

Be careful on the step-stones as you can only jump from one to another if they are in the middle-position. Again find as many notes as you can and find the dynamite. Return to Texas. Use the dynamite to release Billy the Kid. Return to San Dimas. Go to the place where you usually get overwhelmed by enemies and use the harmonica. You can now safely enter the next part of San Dimas. Every time you pick up a note in this part, a block will disappear somewhere else, thus letting you reach other notes after which you will be rewarded with a golden key. Return to Europe.

Collect 16 notes. Use the golden key to enter the previously unaccessible house at the swamp. Here you will find a mandolin. You can use this to enter the previously locked part of San Dimas. The Grim Reaper welcomes you, and you're now ready to play his game. As the exact route isn't easy to explain in a solution like this, I'll just tell you what to do. The objective of this part is to collect yet another 16 notes. Sometimes it is necessary to shove blocks over the lava in such a way that you can go to other parts of the playing field. The princesses have got the last note. If you succeed in rescuing them you should have 144 notes by that time. To get back to the entrance of the playing field, go east from the place where your rescued the babes. The go south and walk clockwise (ie: south, west, north). When you are standing against the north wall, walk west to the corner and go counter-clockwise. Once in the northeast corner you must go west, south, west and north to the exit. You'll have to find the correct tiles to jump on all the way yourself. Now you must return to the phone booth. The Grim Reaper is guarding it, but when you play your guitar he suddenly realizes that he has LOST! Enter the booth and travel through time to finish the game!

BLUE LIGHTNING

The codes are:

You can land upside down on the Courier Run mission (LOCK).

For bonus points, hit your afterburners as you enter the canyons on level BELL. The Gutsy Bonus will give you 30,000 points ("You've got guts!"). When you're in the canyons fire your afterburners for 65,000 points (Lunatic Bonus) "You're crazy!!" The points are added when you land -- but if you do both, it will only display the Lunatic Bonus, but you get points for both. (A good place for the second bonus is right before you enter the second set of canyons)

CALIFORNIA GAMES

Although the manual says it's two player, up to 4 can be Comlynxed. It may take a few tries, but keep at it. (It's also a bit slow, but hey, it wasn't meant for 4 players.. :)

BMX: If you stay just a little (about one pixel) above the place where the grass meets the dirt there won't be anything in your way (Like those pesky bales of hay). You can crash the game by hitting the bale of hay on the bottom of the track just before the finish line. The game will freeze and the only thing you can do is turn it off. **Tiny tid-bit:** If you're going really fast when you cross the finish line and jump just a little after crossing it, you will end up crashing into something you can't see way to the right.

SURFING: In the surfing game, you can ride the pelican. Run your last man into the bottom of the screen a few seconds before the timer runs out. The bird will fly across the screen until the timer runs out and you'll land on it! It's possible to do an UNREAL 360 (5 360's) for 1200 points (As opposed to 600 for a Quadruple 360)

FOOTBAG: If you spin right after jumping, you spin faster than normal. Thus, jump and hit the bag with your head, then spin away... Also-- in the manual under Foot Bag it says: "Score an extra 50 points for hitting the seagull in the beak with the foot bag (but only in this game -- be kind to the birdies in the other events)."

[Thought that was pretty cute. :) d.g.]

HALF-PIPE: Hitting Option 2 while skating will show off the Lynx's awesome scaling capabilities.

***	Mandelbrot Generator	MAND

The code for level 146 was found on level 34 (Cypher). That level spells out: JHEN which is the password for level 146.

[On atari.archive.umich.edu in /atari/lynx is a PostScript file that has notes and a few maps for the levels. (ChipsChalngNotes.ps.Z)]

Mandelbrot Generator Instructions:

Thumb Joypad: Move the zoom in/out window

A: Zoom in

B: Zoom out

OPTION 1: Stop/start fractal generation

|| (PAUSE): Parameter menu, OPTION 2 picks which fractal set, OPTION 1 restarts the generation

OPTION 2: Toggles between three modes:

- stops generation
- animation through color cycling
- reverse color cycling

There is a limit on how far you can zoom. The "zoom-in" effect is a good example of the Lynx's ability to automatically scale bitmaps.

The Lynx Mandelbrot code does 48-bit fixed-point math using 8 bits of integer and 40 bits of fraction, via the hardware multiplier (16x16) and a lot of help from the 65C02. The comment line on it (the source) says it was written by Steve Landrum of Blue Lightning fame.

CRYSTAL MINES II

Atari Lynx Crystal Mines II Level Codes

(still missing 25 bonus levels)

Compiled by Johanne Kaminski <casper@tsoft.net>, January 1993

1-TSLA	2-UEPT	3-MTFQ	4-IRTR	5-ZCXP	6-DPRX	7-OIGT

Of the 31 bonus levels, I thus far have only these 6:

0-ZERO (precedes level 1)
 3-DBFQ (get to through level 27)
 9-BIOH (get to through level 55)
 10-BNRY (get to through level 59)
 21-TMCB (get to through level ??)
 23-PNZS (get to through level 119)

Thanks to Arun Welch <welch@cis.ohio-state.edu> for bonus level 0.

If you have codes for any of the other bonus levels (even just one!),
 please send them to <kaminski@netcom.com> or <casper@tsoft.net>.
 Thanks, and have fun!

Enter the password KIMI but don't press the A button to start the game. Instead hold down Option 1 and Option 2 buttons and press B. You will hear a sound like a machine gun and you'll see the first level (Down in the Dirt) appear on the screen. Press A to skip ahead to the next level or press B to move back through the list. When you see the level you want to play, press any direction on the control pad to start the game.

DRACULA THE UNDEAD

From: dab1@ukc.ac.uk

First, get the notebook from the chest of drawers. Go into the bedroom and get the tinder box from the table and the crucifix from the bed. Use the crucifix. Go to the dining room, get the oil from the table. Talk to Dracula, and immediately afterwards, use the notebook. Go to the antechamber, open the window and look out of it. Use the notebook. Climb out of the window and go to the next window on the right. This room should be the bedroom. Open the window and climb out of it. Make your way to the top right window (it should be a big window like the one you climbed out of initially). Examine the table, then use the notebook. Get the lantern, fill it with oil and light it with the tinderbox. Go through the door on the right into Dracula's money room. Get some money, get the box, then open the box. Use the iron key you find in it on the door. Go into the crypt. Turn the lantern so that it says "The lantern has been turned down". Go down, right. Get the twine. Go right, down, down. Get the crowbar, examine the coffin, use the notebook. Find your way back to Dracula's study. Climb out of the window, and go back to the top left hand window. Go to the south wing landing and use the crowbar on the door. Enter the sewing room. Wait to be returned to the bedroom and then use the notebook. Climb out of the window and go to the top left hand one. Go to the dining room, get the sugar from the table. Go back to Dracula's study and get the lantern. Light the lantern with the tinderbox and enter the catacombs again. Go down, right, right, down, down. Get the small brass key from the coffin. Return to the south hallway and use the small brass key to open the clock. Get the small key. Return to Dracula's study, examine the desk and then use the notebook. Get the hook from the drawer. Go to the money room and turn the lever on the bottom wall. Enter the library through the door which opens and examine the books. Examine the book you get, then tie the twine to the hook. Enter the catacombs and go down, right, up, up. Climb the ladder and then use the sugar on the horse. Get the spade and use it on the well. The fishing line on the well, then climb down the well. THE END.

ELECTROCOP

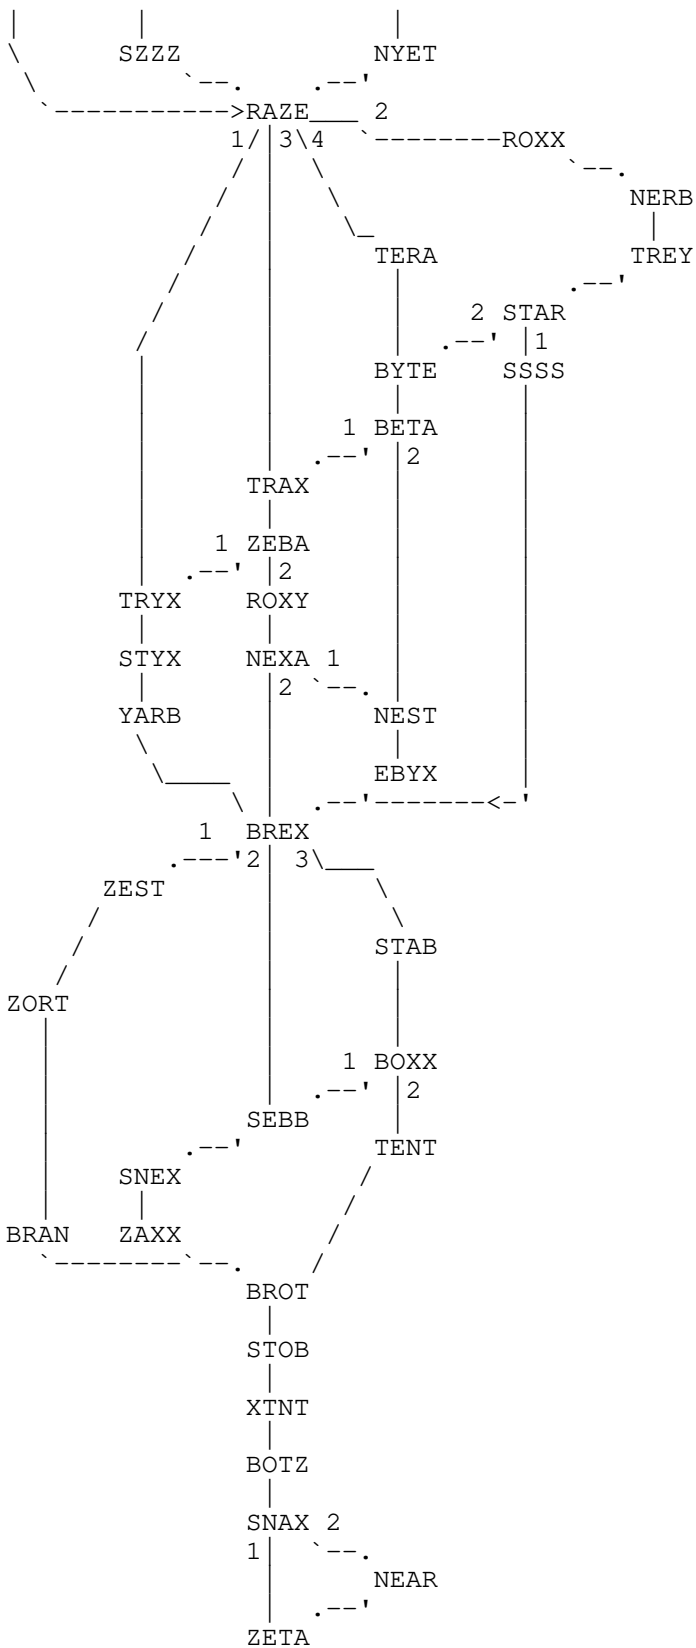

Here are the codes to all the doors and what they contain.

Level 1 D1 = 2473 -> Level 2 Level 7 D1 = 6021 -> Level 4
 D2 = 9874 -> Level 2 D2 = 5824 -> Level 9
 D3 = 8743 -> Weapons

 Level 8 D1 = 7698 -> Level 6

Level 2 D1 = 3287 -> Lvl 7 (Right)
 Lvl 3 (Left) Level 9 D1 = 0170 -> Pla.Cannon
 D2 = 5409 -> Empty D2 = 1092 -> Empty
 D3 = 7102 -> TriLaser

Level 3 D1 = 9284 -> Level 4 D4 = 4726 -> Empty
 D2 = 7210 -> Level 4 D5 = 1375 -> Level 11
 D3 = 3936 -> Smart Bomb D6 = 2857 -> Bi-Laser
 D4 = 7395 -> Plasma Cannon D7 = 6998 -> Tri-Laser

-- Howard Chu @ University of Michigan

GAUNTLET

There are three endings to this game. (Not a cheat, but cool info...) Choose a character and start the game, but do not move your player. Each time you press OPT 1, you will jump ahead five levels.

KLAX

You can warp to level 56 by getting a "Big X" on level 11. You can also warp to level 51 by getting a "Big X" on level 6. Both of these give you bonuses of ~60,000 points.

MS. PAC-MAN

To get extra speed press Pause, Option 1, A, and Option 1. A lighting bolt will appear, and unpause the game. Press 'B' to use it. To get five lives in reserve press Pause, Option 1, B, B, A, A, Option 1 (only once per game). Start game, pause and press option 1, B, B, B, Option 1, unpause. Now use option 1 to skip levels. Start game, at anytime pause, hold down option 1 hit A, B, A. Then release option 1 and hit option 1 the 2nd time. The Light Bolt will appear. Hit B to activate. (from Star*Lynx)

PAC-LAND

First get a high score. Put 330NE as the high score name. As long as that's the highest score, you'll get ten extra lives when you play.

QIX

QIX Codes

Codes found by: Patrick and John Hardie
Flushing, NY

Text File by: John Hardie 03/18/92

After level 255 you go back to level 0. There is no known code for level 1. [I don't think this file is right, but I don't have QIX to test it myself. If you think you can get this file to me in mail, please give it a shot! -- kd]

RAMPAGE

To play any of the 61 levels, pause and unpaue the game on the selection screen before you choose your monster. At the newspaper screen, you can choose a level with the joypad while holding down Option 1. Here's a bonus: Activate the level select trick (Pause and unpaue when choosing your monster). At the newspaper, hold down Option 1 and select Day 6. Press Pause twice. Hold down Option 1 and select Day 15. Press Pause twice. Hold down Option 1, Option 2, and the 'B' button simultaneously. The game will end, but there will be a "smiling programmer" instead of the winning monster.

RAMPART

[I'm not sure exactly how to do this one, if someone knows, please mail me... --kd]

Clear two veteran levels and ??? and push the joypad left as if you were trying to select a different battlefield. The highlight will disappear and then you press A or B you will play on one of the two player levels.

During the cannon stage, if you click five times on a place where the cannon can't be built, you'll go on ahead to the firing stage. One strategy is to place the cannon over a boat you plan to target and click five times, so that when you start the firing stage the crosshairs will already be over the boat.

ROAD BLASTERS

Hit the first tree on either side of the road, hold down the B button on the first level. Or, drive slowly on the right side of the road. Inch forward to the first tree, and wait until it disappears, and press the B button. You can now use OPTION 1 and OPTION 2 to select your *next* level. You'll also get the pictures of the programmers. (You can also drive down the left or right side of the road holding the B button...) Deaccelerate from 204 down to around 188 or so and accelerate again until you get up to 205 MPH! (from Star*Lynx)

RYGAR

Floating shield trick: Throw the shield in front of you, then restart the game with Option 1 and Pause. When you restart the game, your shield will be floating in front of you. As soon as you fire, your shield returns to normal. (programming glitch?)

SCRAPYARD DOG

When you start the game, wait until your man appears and press PAUSE Now press right on the joypad and press the "B" button at the same time. You should see a message at the bottom of the screen that says "SHIELD AWARDED." Note: This works only once at the beginning of each level. Found by: Sky (John Hardie From Flushing, NY) Feb. 1992.

SHADOW OF THE BEAST

Keep in mind when you read this that Beast is an arcade game, thus just knowing how to do this may not be enough. Quick reflexes may be necessary. Also, my strategy is not perfect in places... if you know how to improve my technique (ie, you don't get hit as much) let me know (tazzzzz@eecs.umich.edu).

Outside. Start by running to the left. Watch for the bats that will fly down (I've only made it through here unscathed a couple times, normally I just run back to the right a little bit and duck when I hear the bats shriek). There are two different sets of bats, and each set of bats will attack in two different smaller groups. As soon as you get past the second set of bats, there are three metal traps in the ground. All you need to do is jump and land between the sets of "jaws". Enter the tree (there is nothing of value further to the left).

In the tree, part one. The small head at the bottom of the staircase will shoot at you when you get a certain distance from it (something you're bound to discover on your own!). Climb down the ladder and head to the left. The game progresses pretty linearly here. You've got a few platforms to jump and a few monsters to dispose of, but there's really only one way to go. When you get past the green guys with the swords (watch out for those spikes overhead!), climb up the ladder and head to the right (passing the next ladder which is heading up) until you come to the ladder that goes down. A bit more jumping on platforms and you'll come to a blue total health restoring potion. Things progress a bit more and you will encounter these golden flying things. When you are at this point, you will climb down a ladder and find a silvery (but with red center) circular device stuffed in a corner to the right (somewhat near a big skeleton lodged in the wall). This is a teleporter that will take you back a ways. Don't use it yet. Instead, head to the left, ignoring the ladder heading down.

Next, you will come to the weird eagle thing that is holding a blue crystal globe. Time his fire-breathing activities and get up close to him when he's not scorching the air in your vicinity. Ducking will avoid the fire. Then, when he's not breathing fire, punch the globe (it will flash each time you hit it). I counted eleven hits for it to be finished. You will then have the blue globe in your inventory (you'll get to use it soon enough). Head back to the right the way you came, and then take the ladder down.

You will climb down a jog in the ladders, and then head left instead of down. To the left, you will find an area with a key. I've found it easiest to jump off of the moving platform into that section and then getting onto the up-down moving platform without the resident blue guy seeing me. (Basically don't walk to the left at all after jumping off of that moving platform. Just hop straight onto the up-down platform). Now, head back to the right. If you need health, climb down that ladder that I told you not to climb down before and head to the left. All the way left is a blue complete health restoration potion.

I have a hint for this whole section. I found it much quicker to avoid catching all the ropes and jumping on all the platforms by simply falling off the ledges. The health potions were conveniently spaced so that I could easily survive these falls (watch out for spikes though!) and leave this area with full health. Climb back up the ladders and hop in the teleporter.

After teleporting, hit option 1 and select the blue globe. The blue globe gives you a nifty missile weapon. Head left and climb up the ladder. When you move to the right, a wall will rise sealing you from escape! There is a lone spike "bush" in the middle of this little battlefield. Stand with the Beast's right foot just about touching the left edge of the bush. When the monster rises up, duck. You should be below his shots. Note that before he rises up, he will fire one shot. Try to jump over them, but they don't do too much damage so don't worry too much. I comfortably get four shots in before I have to duck. It takes fifteen shots total (don't waste these shots, I've found them useful later). Hit option 1 and select "exit" in order to go back to regular punches. Off to the right, you enter the second half of the tree and a new save point!

In the tree, part two. As you run to the right, you will run past a machine with a lever, gears and a chain coming out of the top. Ignore that for the moment, and jump over the spikes. After you climb down the ladder, there will be some snakes coming out of the floor and spitting at you. Just run up to them and punch them after they spit. After the second and third snakes a bird thing will fly down and you will need to duck. Don't take the downward ladder after the snakes. Instead, pick up the gear and head back to the machine. Once there, hit option 1 and select the gear. Assuming you're standing close to the machine, the gear will go in place. Punch the lever and a platform will lower. Climb onto the platform and punch the lever again to go up. Go to the right and get the torch hanging from a support pole. Head left, beat up some green guys and flip the switch on the wall. Climb up the ladder you past when you went to flip the switch, and head left past the bouncing eyeballs (!?). When the dragon stops breathing fire, run, pick up the key and stand next to him and wait out his next attack. After that, run back to the right and past the eyeballs. If you need health, head to the right and pick up the blue potion. Otherwise, head back down the ladder and the "elevator". Go past the snakes again, and then head downward. Head right and punch the lever. Then turn back and cross the platform that had been extended across what used to be a gap. Punch the lever you find off to the left and then go back to the right and downward (gadzooks! They've got you running back and forth!). Run left after getting to the bottom of the ladder and use the moving platforms to take you further left. You will find a blue "glove" suspended in midair. If it's surrounded by electricity, you forgot to flip the switch in the hallway underneath those bouncing eyeballs. As you head back right past the ladder, a couple of those red batlike things will fly down. Try to hit them, because now is a good time to conserve health. You've got a ways to go before a refill. Continue on downward and avoid the obstacles (I have really got much to comment on here. Just practice your timing around the spikes and try not to get hit.) When you get to the ghosts, if you head right instead of down the ladder to the left you can avoid having to deal with these rocket engines that are mysteriously igniting. However, only avoid those engines if you have the health to take a fall into spikes (and you must also be confident of your ability to get rid of the dragon). Hit option 1 and select the yellow glove. You can't kill the dragon without it. If you watch the timing, you will notice that the spike will drop to the floor and the dragon will stop breathing fire. That is when you need to jump across. You can comfortably punch the dragon five times before you need to jump back across when the spike is down. It takes a total of thirty hits to blast this guy. Use the yellow key you picked up to leave the tree area through the well.

Topside once again. All right! So we're out of that hellhole of a tree. Well, there's still a bunch of ickyness to deal with up top. First, stand in front of the cannon. After the nifty little green dude lights the fuse (wait for it to be burning), punch the cannon. The little guy gets blast and leaves a handy gun behind. Now, head back to the right eliminating the baddies that you encounter. The columns that look like piles of rock contain potentially useful items (there is only one evil column in the game, and that comes near the end). The first two you come across have health bonuses. The last one contains a large ball. Push the ball along with you as you avoid the spikes and use it to plug up a hole from which some green and red balls are popping. When you get to the funky pterodactyl statue, don't be alarmed. This is actually a pretty easy monster. He does a bit of damage if he hits you, so don't let him. Punch the statue five times to let the monster out, and then punch him three times to take back the freedom you just gave him. I personally hate the spider forest that comes next, but at least there is health afterwards. The eyeballs aren't too bad once you see the holes that you can rest in. Duck as the green guy flies overhead, and then punch him

as he comes back around but lower. When the flying dragon drops the winged bomb, punch the bomb before it explodes and it will eradicate the annoying swarm of insects. I think you can handle the rest of the obstacles until you get to the castle.

In the castle. Go left, past the ladder, and get rid of the green, hoppy guys. Flip the switch. Go back and climb the ladder. You can only punch wooden barrels; the silver balls and indestructible. There are two wooden barrels followed by a metal ball, and this repeats itself indefinitely. Hit the first wooden barrel, and use the ladder up to the next level as a means to dodge the second barrel and the metal ball. When you get to the floor where the barrels are dropping down, run to the left and flip the switch. Climb the ladder to the top floor, and punch the chests to the right for health, except be forewarned that the very last chest contains a green guy who shoots arrows, and the second to last chest can be stood on to avoid the arrows. Kill the green guy by punching the chest before getting the last bit of health. Run to the right, avoid axes and flying dragons. Pick up the wrench. Climb down the first ladder you come to. As you run to the right, watch for green dudes in the floor which throw knives at you. To avoid getting hit by the axes that come down, stand right underneath whence they come, and they'll fly over you from each side. After defeating the three big green mouths, run and jump across the gap. You need to jump at the last second to make it. Punch the little head in the wall three times, and jump onto the chandelier as it lowers. Wait for the spider to go up to run underneath it. More axes. Some spiders need to be punched once or twice before they'll go up. After climbing down the ladders, you'll be back near the entrance. Go right. You might want to consider using some of your remaining shots from the blue ball to kill the red bouncy blobs and the bats after them. The gates here will only be open if you've flipped both switches prior to getting here. Climb down the ladder; don't go all the way to the left. Some health is on the right then. Go left, wait for the metal ball to pass, go left, climb the ladder, climb into the pit, and duck. Wait for the ball, go left, and climb down the ladder. Pick up the spare bullets, and climb down the next ladder. Run to the right until you see the gargoyles; then run back to the left, and punch the button on the wall. There's another green guy in the floor after the axes. Use the wrench to get past the electric field. Climb up the ladder, go to the left, and flip the switch. Arm yourself with the gun, climb down the other ladder, and go to the right. Get in close, and just shoot. And keep shooting. You shouldn't need to refill the gun. Use the blue key to unlock the door. You are now outside.

Outside the castle. Go right. Punch the tombstones for health. In the second set of tombstones, the second tombstone contains a ghost instead of health. Kill everything. To kill the final guy, watch his shot pattern. Get in close and jump and kick the face in the middle of his body. Congratulations, you won.

SHANGHAI

To view the victory screen, go to the high score table and press Pause. Hold down Option 1, Option 2, A, B, and press the joystick diagonally up and to the left.

SLIME WORLD

At the title page, hold down OPT 2, then hold down OPT 1. Next press the joystick up and right. Let go of everything at once. You will be invincible! In multiplayer games, all invincible players are kept in an "alternate universe". Basically, invincible players will show up on the maps of other invincibles, but not on the maps of the regular players.

One (There may be others) secret level is on level 6. As soon as you enter shoot the floor immediately to the right of Todd. The floor will open up to another level.

A 'Zit Popping' game can be played by going to the summary screen and then going to the screen where Todd is green. Press Option 1 and you'll see a zit. Blow it up by hitting the buttons as fast as you can.

4EB435 and 6134A4 will crash Slime World so completely that the only way to recover is to turn the lynx off and on again!

The codes found in this text file were compiled by Mr. Kale Swindell of La Canada, CA. He indicates that these codes will place your character (TODD) at one of the restart stations located in the game. The further along the code is in the list, the further into the level your character will be restarted.

Adventure 6: ARCADE

012D7C	016E39	016938	00EAA5	002A64
--------	--------	--------	--------	--------

S.T.U.N. RUNNER

Start out at level 11 (Labyrinth) and complete it. On level 12 (Coathanger) go right and catch the boost and continue going right. You will fly up and then continue and cross the finish line. You will be warped to level 18!

SUPER SKWEEK

Choose Normal Game from the options. At the map screen position Skweek (or Skruch) over the "O" in the word GARGOUIL LAND and scale until you can't fly any lower. You will see a snorkeling furball. It may take some positioning, but maneuver yourself over the furball and then press OPT 1 so you can go to the forbidden islands. If you want two extra men, scale onto the small island directly to the right of the WELCOME ISLAND in the upper right corner of the dark blue spot. You will see a Skweek next to a palm tree. Hover over it and push OPT 1 for two extra lives. To gain 3000 extra coins, scale over to the large body of water in the PAGALAGOS ISLAND. You will see a Skweek. Hover over it, push OPT 1 and the cash is yours. (from July 1992 EGM)

TOKI

Press and hold down OPT1 and UP before the title screen appears get into "freak out" mode. Pressing A or B starts the game normally (from Star*Lynx BBS).

For those of you trying to get the digitized picture of the TOKI designers to appear in TOKI but are having trouble, I've found that holding the pad UP and holding OPTION 1 simultaneously JUST as the screen fades to black to show the "Continue" screen usually produces the white dot after the timer expires (of course hold UP and OPTION 1 through the whole duration of the continue screen.)

While trying to get the digitized picture, I discovered an "additional" trick (at least I think no one has posted about this before.) Kill all your men in TOKI. Once at the "Continue?" screen, after the first "beep" of the countdown, and while the timer still shows a 9, press UP and OPTION 1 at the same time, and hold them, just like for the digitized trick. You'll see the GAME OVER screen, but keep holding them. The TOKI demo will appear... keep holding UP and on OPTION 1. After the names of the designers fall down, the demo should go psychedelic!! The demo will cycle through colours, a catchy tune will begin, and the pad will allow you to sample digitized TOKI

Lynx Cheats, January 27, 1993

sounds...furthermore, pressing DOWN and LEFT repeatedly will cause the samples to descend in pitch. Conversely, pressing UP and RIGHT repeatedly will cause the samples to ascend in pitch.

Note: Once the new demo begins, release UP & OPTION 1. Then use pad to sample sounds.

Have fun!

Jason

Burnaby, B.C., Canada she spoke, said: 'How can I know what I think
bennetta@sfu.ca till I see what I say?'" --Graham Wallas

TOURNAMENT CYBERBALL

In Tournament Cyberball there is an apparent bug in the game that can be a real cheat. This works well against another human player. I haven't tried it against the computer. I'm guessing the computer is "too smart" to fall for this cheat. Anyways, if you're fairly far up the field, you can run your quarterback all the way to the opposite end of the field, before throwing your pass. "Unrealistic" passes can be completed from the opposite end of the field. Watch out though, some computerized cyberbots will follow you all the way.

The advantage of this cheat is simple: It takes out a few of the computerized defenders, and it throws the defense player off by not allowing the defense player to see where your receivers are going. In other words, all you see on both player's lynx's is a pretty much blank screen with nothing but a quarterback and a few rushers....With enough practice, one can have little trouble blindly throwing passes like this.

Lastly, don't try this cheat on the "Real" arcade version of this game. It doesn't work. Actually it's quite amusing what happens. When you think the quarterback is going to throw a 70 + yard pass, he/she/it ends up throwing a pass that lands like 1 yard right in front of the QB. Try it if you're ahead sometime on the arcade version. Is kinda amusing....;-)

VIKING CHILD

Viking Child -Codes-

Village Castle: OMEGAMAN

Forest Mountain: PATRICIA

Land Bridge Lake: REDDWRARF

Labyrinth Mund Flat Volcano: DEWSBURY

Desert Pramid: ISLAND

Codes from Wizz Kidd (Mike Reed from Tempe, Az)

WARBIRDS

When playing alone, pause the game and you can still look around with the 'B' button. This may help new pilots so they can pause the action, look around and plan their route.

For single-player Grave Sight, as soon as you die (when the roses and skulls border appears) quickly pause the game. 'A' button will change the viewpoint from plane to plane (And to the point where you died). Look around with the joystick.

XENOPHOBE

Hints:

First the basics. I love the yellow electro gun, so all my strategy revolves around this gun. The puffer gun does more damage.

I usually crawl along the ground and fire alot. I stand to kill festers and ceiling vines. Jump to move quickly.

Festers (the fellows who appear on the sides of the screen) Take these guys out by being just over half a screen away from them. Fire like crazy. You better make sure you are at least half a screen away because these really hurt! You can advance on them once they retreat and expose their hand, makes killing them easier if you do. When they throw stuff, you better be facing them and firing... Getting hit by this stuff stuns you, likely costing your life on later levels. You can kill them with the puffer gun by laying low near the edge of the screen, and standing up and firing as soon as they start to retreat. You can always ignore these guys buy crawling along the floor... but it's good to take them out as soon as you can. They produce other aliens, and create another hazard. You can often kill festers on the adjacent screen by firing very close to the edge. I used this to my advantage alot on level 22, which is almost nothing but festers.

Ceiling vines: As I mentioned earlier, make sure you don't move into them while firing. Stop, then aim up and fire.

Rollerbies (the armadillo like things that curl into a ball) Getting hit by these balled up creatures can stun you for some time, like the festers can, which means losing your life in later levels. Fire alot at them to make them roll the other way of course. Don't fire too much if there is a closed door in the way, as they'll bounce back at you at high speed. They unravel once they stop moving. I often fire once or twice at them to make them stop. They then unravel and I kill them. Or, I throw a grenade, and fire just enough to make them be near the grenade. These guys are what really threatens your life at the beginning of later levels... Don't underestimate what a mob of these can do to your game. :) One stuns you, then every alien and their brother beat up on you while you can't do anything. Then you lose your gun, and losing your gun on later levels usually means the end of your life, if not your whole game! (you usually get a laser with your new guy, which often is inadequate). Point blank shots often don't work on these guys for some reason, very important to remember.

Laser firing security drones: Of course you can make these stop firing at you by getting the disk and putting it in the security machine. But did you know that you can kill them? You have to fire alot, unless you have a puffer gun. Stand and fire diagonally up, fire like crazy, and don't change directions! They'll move right into your fire. The laser gun does so little damage, it is questionable if you should do this with that gun. I kill these drones on every floor I encounter them until I find the disk.

Little crawling aliens: crawl and fire alot, jump if you they stick to you. On later levels, it often isn't wise to jump immediately... you might jump into a festers xray beam, and get stunned, lose your gun, your life, your game...

Snotterpillars (big hopping spitting aliens): While heading towards a new screen, if you hear that you are hitting something just before you enter the new screen, stop and keep firing until the sound stops. Then fire a lot as you enter the new screen. Firing at them usually stops the nasty spittle they throw. You should have no problems taking out mobs of these fellows by firing alot. Stop moving as soon you are hitting one, you want to hit them as far away as you can. I am pretty brave with these guys, I'll take on a big mob of them at once. Just fire very very fast. If too many get close, or are about to, move directly away and hit jump twice (or more) in a row. This one tactic is the main reason why I survive so long! Not only does it make you run away quickly, it also has the effect of dodging their spittle. Practice turning around and hopping away repeatly when there aren't aliens around. Make sure you are moving away before jumping, otherwise you'll jump up instead of away, and then you're really If you have the puffer gun, have no fear-- if you fire fast enough, you can kill a solid wall of these guys with it. machine that spits out bombs: Each bomb does 200 damage I think, so be careful. Jump away or over bombs that get thrown near you. hit option two to fix the machine, then hit option one until you have a full load of grenades.

self destructing: often a good idea, unless you are about to finish the level. You won't get 200 bonus health, but on later levels you'll probably lose more than that. I usually self destruct 2 or maybe 3 levels.

Fire levels: I am continually switching from the fire extinguisher to the electro gun on this level. Put out the fire, run and grab your gun and clear the rooms until you hit the next fire, etc. You can push along both guns, but it's risky. Fires count as part of the alien remaining count... so don't leave the fires for last! Otherwise you'll get stuck with a fire extinguisher on your next level. If I'm cautious, I often gain more health than I lose on these levels.

level 21: This level is utter hell. Makes every other level look silly. Be paranoid with every room you enter. I can't stress enough how hard this level is. Fire as fast as you can. Good luck keeping your gun... that's the main thing actually on the later levels, keeping your gun. The beginning of 21 and other later levels is hellish, this is one place where I wouldn't feel guilty using alot of grenades. Those hordes of rollerbies are a real problem at the beginning of levels.

level 22: This level is as easy as 21 is hard. Almost nothing but festers. This level might not be so easy if you don't have an electro-gun. I always have one here.

level 23, final level: Use my technique for killing snotterpillars, especially hopping away repeatedly when mobs get close. Grenades here can take a wall of snotterpillars, what a rush. :) Keep up a wall of fire to stop their spittle. Be wary of hidden ceiling vines on the edges of the screen. Fire as fast as you can when you see the mother alien, crawl behind her while firing when you've cleared the other aliens in the room. Fire at her head once you're behind her. (diagonally up from ground)

It's important to learn to survive with a laser gun until you can get something better. Be very conservervative, do most of your killing from the adjacent screen. Hit things as far away as possible. Run from snotterpillars when they get inside your max range (yup, hop twice again..) use grenades if you have to. God I hate losing your gun on the later levels. Free free to mail me any questions and comments. Is the arcade game exactly the same?

ZARLOR MERCENARY

ZARLOR MERCENARY / The Game of Life

ACCESSING LIFE: The game of LIFE is accessed through the character selection screen of Zarlор Mercenary. Turn on your Lynx with the Zarlор Mercenary game card inserted. Press the fire button twice to get to the character selection screen. At this point you must hold down **OPTION 1** while moving the joypad as follows: Up, Down, Left, Right, Up.

At this point your screen should say LIFE and there will be a LIFEform known as a 'glider' moving across the screen diagonally. It will go off the edge of the screen and return on the bottom, eventually running into the cells forming the word LIFE and causing the chain reaction that destroys the title screen.

Before the title screen is destroyed you may try the following controls:

1. Moving the joypad or pressing either **OPTION** button or **PAUSE** will stop the current evolution of LIFE.
2. Pressing **OPTION 1** to continue the evolution puts LIFE into a mode where cells that reach the edge of the screen wrap around to the other side.
3. Pressing **OPTION 2** to continue the evolution puts LIFE into a mode where cells that reach the edge of the screen behave as though they have reached a solid wall. This may be useful if 'gliders' that are launched are disrupting your LIFEforms.
4. Pressing either **BUTTON A** or **BUTTON B** puts LIFE into **DRAWING MODE**.

DRAWING MODE: Access **DRAWING MODE** by pressing **BUTTON A** or **BUTTON B** while LIFE is evolving or after the current LIFEform has reached a stable state. You can tell you are in **DRAWING MODE** because the joypad will be in control of your cursor, a set of green crosshairs. While in **DRAWING MODE**, your controls behave as follows:

1. Moving the joypad with **BUTTON A** depressed will allow you to draw.
2. Moving the joypad with **BUTTON B** depressed will allow you to erase.
3. Pressing **OPTION 1** or **OPTION 2** will allow your LIFEform to evolve, as described in 2 and 3 in the above **ACCESSING LIFE** section.
4. Note that the screen cannot be flipped, but attempting to **RESTART** the game will cause the screen to be cleared, and you will remain in the **DRAWING MODE**.
5. Pressing **PAUSE** and **BUTTON A** will put you in **COPY MODE**.
6. Pressing **PAUSE** and **BUTTON B** will put you in **PASTE/ERASE MODE**.
7. Pressing **OPTION 2** and **PAUSE** will copy your current screen to a temporary buffer (see below).

COPY MODE: Access **COPY MODE** by holding down **PAUSE** and pressing **BUTTON A** while in **DRAWING MODE**. You can tell you are in **COPY MODE** because the green crosshairs will be onscreen with the word **COPY** in green below and slightly to the right of the crosshairs. While in **COPY MODE**, your controls behave as follows:

1. Pressing either **OPTION 1** or **2** will return you to drawing mode.
2. Holding down **PAUSE** and pressing either **OPTION 1** or **OPTION 2** will evolve your LIFEform frame-by-frame. Note that the **OPTION** button used determines whether screen wrap is on or off.
3. Pressing **BUTTON A** sets one corner coordinate of a box that you can draw. Pressing **BUTTON A** again sets the other corner coordinate of the box. Anything within the box is now in your **COPY BUFFER**. You are now in **PASTE/ERASE MODE**.
4. Holding down **PAUSE** and pressing **BUTTON A** takes you to the LIFEform library, a screen full of goodies for you to put into your **COPY BUFFER**. After selecting a LIFEform or group of LIFEforms, you will be in **PASTE/ERASE MODE**.
5. In the LIFEform library, pressing **PAUSE** and **BUTTON A** again takes you to your temporary buffer (see above). You can cut items from this buffer to the main screen.
6. Holding down **PAUSE** and pressing **BUTTON B** takes you directly to **PASTE/ERASE MODE**, using whatever was last put in your **COPY BUFFER**. If you haven't yet selected anything, you may get garbage.

PASTE/ERASE MODE: Access **PASTE/ERASE MODE** either by holding **PAUSE** and pressing **BUTTON B** while in **DRAWING MODE**, or by going to **COPY MODE** and selecting LIFEforms from your screen or the library screen. You can tell you are in **PASTE/ERASE MODE** because your joypad now controls whatever you have in your **COPY BUFFER**. While in **PASTE/ERASE MODE**, your controls behave as follows:

1. Pressing either **OPTION 1** or **OPTION 2** will return you to **DRAWING MODE**.
2. Pressing **BUTTON A** will allow you to paste your **COPY BUFFER**.
3. Pressing **BUTTON B** will allow you to erase using your **COPY BUFFER**.
4. Holding **PAUSE** and pressing **BUTTON B** will flip your **COPY BUFFER** any one of eight possible ways.

5. Note that the screen cannot be flipped, but attempting to RESTART the game will cause the screen to be cleared, and you will remain in the PASTE/ERASE MODE.
6. Pressing PAUSE and BUTTON A will put you in COPY MODE.
