

Macintosh - Windows Comparison #7

Launch a Document

Open a Document after Its Server-based Application is Moved

Mac OS

1. Double-click the file or select it from the Recent Documents menu.

Windows 95

1. Double-click the file; or click the Start button, select Documents, and click the filename.
2. You'll receive the message: "The item 'filename' that this shortcut refers to has been changed or moved. The nearest match, based on size, date, and type, 'G:\Windows\Application\diagram.xxx.' Do you want the shortcut to point to this item?"
3. Click Yes.
4. You'll receive the message: "Windows cannot find Application.exe. The program is needed for opening the files of type 'application file.' Check the given pathname for the application."
5. Click OK.
6. You'll receive the message: "Cannot find the file 'G:\Folder\Application.exe.'"
7. Click OK.
8. Click Locate, then search through folders on the network to find the application. Or contact your network administrator for assistance.
