Memphis Math

Installation
During the installation several changes were made to your system setup. _Memphis Math_ uses _Btrieve_ to track the game's status. _Btrieve_ requires SHARE.EXE to be loaded. Rather than modify your AUTOEXEC.BAT, during the installation a virtual device driver VSHARE.386 was added to your SYSTEM.INI.

Sound Drivers
If you experience problems with your sound, verify that you have the latest drivers installed. Some beta sites reported difficulty with the background music not playing, when using Media Vision™ ProAudio Spectrum. These problems where resolved by upgrading the sound driver to version 1.45 or later.

Video Drivers
If you experience problems with your video displaying, verify that you are using the latest drivers available from the manufacturer. In particular, several beta sites needed updates for the Cirrus Logic video display driver. Make sure you have CLGD5426/28 Release 1.43 or better. Contact your manufacturer for update.
