

**El código ya ha sido agregado a la memoria
inicie Visual Basic 3.0 Profesional, vaya a
la Sección [Declarations] y presione (Shift+Insert)
El Código se agregará al proyecto
rápida y automáticamente...**

Data Wizard...

DataBase Wizard... ha sido creado para aquellos programadores en **Visual Basic Versión 3.0 Profesional** que necesitan más velocidad y soluciones más practicas en la creación de sus programas en lo referente a las bases de datos.

Con **DataBase Wizard...** solo necesita abrir una Base de Datos en los formatos reconocidos por **Visual Basic Versión 3.0 Profesional** y automaticamente el codigo para volver a crear la base de datos se posicionará en la memoria, solo tendrá que pegar el contenido de esta en el menú [**Declarations**] para que este Sub-Procedimiento tome su respectivo lugar dentro del proyecto, acto seguido solo lláme el proceso con el nombre del archivo que desea crear como base de datos por ejemplo:

```
Sub Command1_Click ()  
    CreaMiBaseDeDatos "C:\EUREKA.MDB"  
End Sub
```

Y eso es todo, la base de datos se creara rapida y automaticamente...

He aqui algunos ejemplos de Codigo Generado por **DataBase Wizard...**

[Ejemplo 1](#) [Ejemplo 2](#) [Ejemplo 3](#) [Ejemplo 4](#) [Ejemplo 5](#) [Ejemplo 6](#)

Recuerde, solo necesita abrir una base de datos para que todo el codigo se genere rapidamente, asi de facil, pruebe con los ejemplos que le proporcionamos y no tarde más en pedir su **DataBase Wizard...**
