TES CONTACTS

Version 1.0 Documentation

Robert Thresher

Welcome

Welcome to TES CONTACTS™, software that will help you to track people. This program will take the drudgery out of tracking those clients, and customers. It works in Microsoft Windows 3.1, and that means it is graphical. Graphical programs are easy to learn and use! With TES CONTACTS and your windows programs, you have a very powerful, and simple program to track those hard to remember Company names and related information.

After you've installed the program and looked it over, you may wonder just how to use all the great functions this program has to offer. Well TES CONTACTS allows you to call up your Callender, Notepad, and even Windows Write or even Word for Windows or Word Perfect for Windows! While in the Table on the main screen of TES CONTACTS you can track client/company information such as, ... When you made that printed or faxed quote to him/her last. Or how about keeping a running log with Windows Notepad.exe. Doing these types of things is easy from Contacts because you can call them with just the click of a button.

What you need to Run TES CONTACTS

TES CONTACTS Ver 1.0 runs on any Personal computer that will run Microsoft Windows 3.1. You should have at least a 40 megabyte hard drive and at least a 386sx16 Megaherze CPU. Memory requirments are low, only 2 megabytes are required. How ever , the more memory your system has the better Windows Programs will run. TES CONTACTS™ will run on Microsofts minimum requirement for Windows 3.1, but runs better with more memory. I recomend you run a faster CPU like the 386dx-33 or higher.

You may run this program with a vga monitor. A SUPER VGA MONITOR IS RECOMMENDED. The reason for this is the program has been devoped with a SVGA monitor and uses it to add more information to the screen, there by allowing you to get a better view of the information you need to get a hold of Quikly in order to make a proper response to a cusomer.

Thresher Enterprise Systems often puts to gether custom systems for clients in businesses. These systems are designed with this type of Multitasking operations in mind. We sellect exceptable Hardware and software for your business, and with your aprovall, integrate a great package like TES CONTACTS. In fact thats exactly how Contacts came to be. I developed this program to utilize Microsofts Windows interface, and Windows Notepad, Write, and Calander, along with a database program to track your clients more easily.

Registering Your Copy of TES CONTACTS Ver 1.0

Please take a moment to fill out the registration . Registering TES CONTACTS will give you the following benefits:

-A copy of the latest version of TES CONTACTS
