Installation and Backup Procedures for the Zipped Distributed Version of ZLotto Ultra!

The following are required in order to run this program:
1. Windows 95 or higher
2. A mouse or similar pointing device
3. Approx. 5.5 MB's of disk space

Recommended options:
1. Printer (For the registered version only)
2. Pentium or better computer
3. Minimum 600 x 800 monitor resolution. The program will work just fine at any resolution however, the screen will get a little cluttered at lower settings.

Installation

   Go to the Explorer or click on My Computer and locate the Setup (Setup.Exe) file for this program on either the A: or B: drive and double click on it. You can also click on "Run..." (in the Start Menu) and type in either "a:\setup" or "b:\setup". That's all there is in starting the installation. When it's finished installing, you'll find the ZLotto Ultra! icon in the Startup menu under "Programs" (just click the "Start" button and go up to the Program menu item).

Backing up

   This is in fact the full ZLotto Ultra! program except that it lacks a special registration number that is needed to unlock all its functions and features. As such, you need to back the [compressed] installation files onto three 3 1/2" HD disks <u>after</u> unzipping them. For space considerations, I recommend the following files on each disk:

           Disk 1
VB40032.DL_   ZLOTTOUL.EX_

           Disk 2
COMCTL32.OC_   MFC40.DL_
MSVCRT20.DL_   MSVCRT40.DL_
RICHTX32.OC_   SETUP.EXE

           Disk 3
CTL3D32.DL_   ST4UNST.EX_
MSMASK32.OC_   STKIT432.DL_
OLEPRO32.DL_   TABCTL32.OC_
README.WR_   THREED32.OC_
SETUP.LST   VEN2232.OL_
SETUP132.EX_   ZLOTTOUL.CN_
ZLOTTOUL.HL_   README.WRI
FILE_ID.DIZ   COMDLG32.OC_

   If and when you ever uninstall the program and then want to install it again, just copy all the files into the same directory (folder) on your hard drive & start the installation process from there. (Refer to the Windows documentation on how to copy files to and from disks).
   For information on registering, refer to the help file after installing.
