Version History

- 3.2a. This version adds ScreenTracking, QuickPlay, Separator characters selection, context help in the option menu, ticks in display menu ... Tooltips are Microsoft compatible. Volume Icon appears under Microsoft Windows NT 4.0 Beta 2. This version also enhances performances of ICCD (ICCD scans no longer the CD-ROM drive all the times to look for the inserted CD)
- 3.2. Tool tips for each button have been added. When the cursor stays over a button for a moment, a tip is displayed explaining the button's function. The bug of a lot of resources being depleted when you wanted to change the display color has been fixed. There's a new registration mode. Now you need to enter your name along with the code. (If you already registered the program, send me regular mail or email with the address you previously gave me and I will send you a new registration code. I need the **exact** address!) The volume control bar has been added to control the CD Player's volume. The no sound button has been added to turn off the CD Player's sound output. (This can be very useful when your boss comes in!) The bug of the window position not saving when using the x button on the application bar has been fixed. The bug that when you were using the scroll bar, you couldn't use the keys afterwards to control the CD's play has been fixed too. You can now have the right-button menu on a button. The ? menu in the English version has been fixed with a comprehensive English text.
- 3.1b. Ergonomic bugs fixed. The Player can now be always on top. The position of the player is saved when quitting, so when you run it the next time it will be at the same position on your screen. Multi-language Dialog Boxes (English & French) were added. Control buttons are now disabled when there is no audio CD in your CD-ROM drive.
- 3.1a. This version fixes several bugs, like the grid display. The Grid is now colored like the other displays. The grid now accepts CDs with 25 tracks or more. The awful "No Disk" bug, which was making the program hang, is now fixed.
- 3.1. With this version you can change the colour of the main display. You can choose a 16 million color palette. You can quit the program with the right-click menu.
- 3.0a. You can play the music just by pressing the "P" key. Stop the music with the "S" key.

Presentation

I created this little program, because I didn't like the audio CD Player that comes with Windows 95. The display was small, and it was hard to select the track you wanted.

ICCD can display what exactly what information you want: time, track name, etc. You can either choose to display the name of the songs, the grid (for fast access), the icon bar, the volume and the menus. (To do so, just double-click on the main display.)

ICCD creates a database named CDBASE.ICD, which is located in the directory ICCD under your main Windows 95 directory. This file contains the name of the disks and the tracks you've added, and the configuration of the program.

ICCD has been designed for Windows 95. It is a 32-bit program. When you insert an audio compact disc in your CD-ROM drive, Windows 95 will automatically start ICCD, and you will hear the first track of your CD.
