RipBAR Pro V2.0a
RipBAR V7.0a

for Windows 95

This README applies both to RipBAR V7.0 and RipBAR Pro V2. 0 (the registered version of RipBAR). If you have registered RipBAR Pro, thank you again -- your support is appreciated!

Password Information (RipBAR Pro only)

* The first time you install RipBAR Pro, it will ask you to enter your registration password. This was provided to you in the cover letter that accompanied your registration package.

Versions

* What you have is the latest release of RipBAR Pro for Windows 95.

Installation Instructions

(Note, if you are upgrading RipBAR, please close RipBAR before proceeding with these steps. The new version will automatically use your current RipBAR settings.)

1. Create a directory (for example, called RIP_BAR) where you will place RipBAR on your system.
2. Extract all files from the ZIP file to the directory you created above.
3. That's it! Create an icon in Program Manager or Explorer for RipBAR. Please spend some time reading about RipBAR's features in the on-line help file as there are a lot of options that may otherwise go unnoticed!

Feedback, Updates

Please consult the on-line help file for the various ways you can reach. We're always anxious to hear your comments so don't be a stranger!

Thank you,

Jonathan Carroll & Naomi Akazawa,
*Soft*Design
