Midi player Copyright (c) Kevin Solway,1996

"Thinking Music" is primarily a MIDI music file player which comes with a large number of my favorite classical pieces which have been sequenced into MIDI format by devoted music lovers. Many of the tracks were arranged by myself.

You are welcome to distribute any part of this package, on the condition that *you do not charge any money for it,* other than perhaps a small fee to cover the cost of distribution media.

The "Thinking Music" MIDI player can be used to play *any* MIDI music file, and offers continuous play as well as customized play lists.

The maximum number of MIDI files that can be read in any one directory is 200, so if you wish to play more than 200 files then split them into different directories.

Usage:

Run the SETUP program to install the program to your hard disk. You will then be able to select "Thinking Music" from your program manager menu.

The program will automatically begin playing all the MIDI files it finds in the same directory as itself.

Stop/Pause play at any time by clicking the stop button:

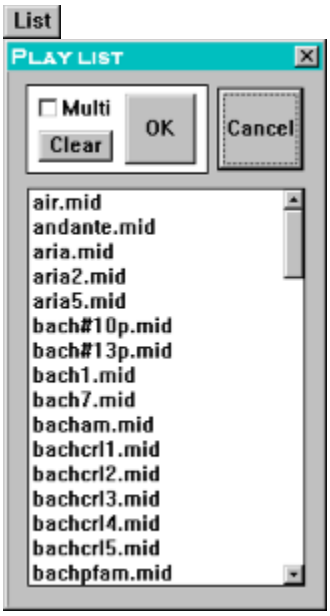
Resume play with the play button:

Move to the next track or the previous track:

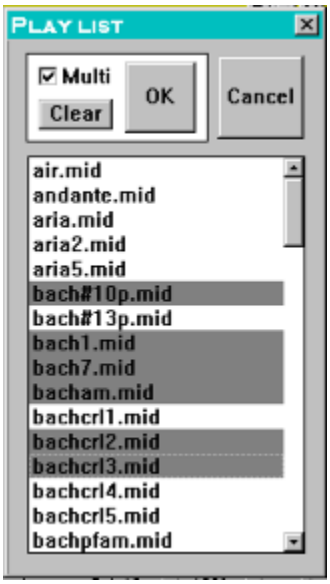
Increase or decrease the volume:

Change the directory for the MIDI files and select a file to begin playing:

Display the play list.



A single click on the file you wish to play will begin playing that file. You can select a particular set of files to play by clicking on "multi" and then clicking on the files you want. Clicking on "Clear" will clear all the currently selected tracks. Click on OK to begin playing your selected files. Here is an example of a multiple selection:



Enjoy!
