Play-Thru! 1.0 evolved from a quick hack to the full System 7-whiz-bang-look-at- how-well-I-eat-disk-space application that is this version during November, 1991.
The author, Shawn Cokus, is a freshman in Mathematics/Computer Science at Carnegie-Mellon University, who may have to work inordinately hard now to maintain his "A" in Calculus and Economics after spending way too many hours reading Inside Mac VI to code this application.

If you decide to keep Play-Thru!, please send $5 or so (it doesn't sound like much, but then think of how much pizza that buys, and you should see how much books and laundry and stuff costs these days) to my home address at:
      5261 Knolltop Terrace
      Syracuse, NY   13215–1571

If you have comments, bug-reports, etc… please send them to the above snail-mail box or use my Internet e-mail address of sc5h+@andrew.cmu.edu. Besides being an exercise in System 7-savvation, Play-Thru! was written to see just what paranoid error-checking is all about. Suffice it to say that you shouldn't have any crashes.

Please read the accompanying TeachText documentation. If you received Play-Thru! without documentation, yell at whomever gave this to you to go find a real copy.
