PopupFolder displays its submenus in PopupFolder format. To modify this format, open PopupFolder in the Control Panels folder and select the settings of your choice.

Font and Size: All contents of PopupFolder's submenus are displayed in Geneva 9. This format lets you view a large number of items. If you wish to modify these settings, we recommend you choose a font with small characters.

Aliases: Select a style to easily recognize aliases in submenus.

Folders: Select a special style for your folders to differentiate them from files, applications, desk accessories, etc.

Folder position: By default, all items in the submenus are displayed in alphabetical (normal) order. The option Folders position allows you to place your folders on top or at the bottom to easily distinguish them from other items listed in the submenus.
