

QuizMaster V1.0

Welcome to version 1.0 of **QuizMaster**. This program was developed by a pilot as a study aid in memorizing various aircraft operational limitations. Questions are asked randomly and any questions missed are retested at the end. It has the capability to produce tests from various question banks. These tests can be a combination of selected or random questions. The test produced is a text file that can then be edited by your favorite word processor. This version of the program is free. Please evaluate it and give feedback. Use your imagination in any changes you would like to see. Have fun! I hope you find it useful.
