Take The Worry Out Of
NetWare Directory Services (NDS) Archival With
The BaehrWare Archive Utilities for NetWare Directory Services!

The Problem:
Novell's NetWare Directory Services (NDS) is a powerful database which revolutionized the networking industry by allowing centralized management of enterprise-based networks. While powerful, some complications can arise when archiving/restoring NDS. Poor/incomplete backup/restore, loss of information, and other problems can cost you downtime -- and productivity!

The Solution:
The BaehrWare Archive Utilities for NDS, a set of two NetWare Loadable Modules (NLM's), overcomes these problems by performing a **complete** archive/restore of NDS on any NetWare 4.1 server. *The BaehrWare Archive Utilities for NDS* offers a simple, stable and affordable solution to NDS backup/restore problems!

Simple:
Prior to archiving your file system with you favorite tape backup software, just load the NDSARCH.NLM. This makes backing up NDS as easy as backing up a directory on the server! ***YOU CAN EVEN ARCHIVE NDS TO A FLOPPY DISK!***

Need to restore NDS? Simply restore the information created with NDSARCH.NLM and run NDSREST.NLM. *Yes... it's <u>that</u> simple!*

Stable:
The BaehrWare Archive Utilities for NDS was developed over a two year period using Novell Certified development tools! You can rest assured that these utilities will not adversly affect your network in any way.

Cost Effective:
The BaehrWare Archive Utilities for NDS costs just *$49.99(US) per file server*, making it one of the most affordable, yet most powerful, NDS archive/restore applications on the market!
