Setting Up AAA UUE

It's not that difficult really. Just copy the included files, UUENCODE.COM and UUDECODE.COM to any path set directory. You might want to move any file named UUENCODE.EXE or UUDECODE.EXE to a non-path set directory until you have tried out the .com versions. They are very very fast and do not prompt you for any information. If you prefer your .exe versions, move them back and erase the .com versions. AAAUUE.EXE can go in any directory.
