

## AccuMail 3.0

by Tony Curro

The United States Postal Service says that using ZIP+4 speeds mail delivery. Going further if you use Delivery Point Bar Code and Carrier Route you can all but deliver the mail yourself. Getting the zip code information can be time consuming. AccuMail is an address-matching system that improves the deliverability of your mail.

Features of AccuMail:

- \* Corrects addresses with misspelled or missing components.
- \* Corrects missing and/or incorrect 5-digit ZIP codes.
- \* Adds ZIP+4 codes.
- \* Adds carrier route codes.
- \* Adds Delivery Point codes.
- \* Standardizes street addresses.
- \* Works on mailing lists in most common formats.
- \* Select specific records based on criteria that you define.
- \* Perform single address lookups.
- \* Browse the AccuMail database.
- \* Print addresses on envelopes and labels.
- \* Print 11-digit barcode.
- \* Print USPS Form 3553 facimilies.
- \* Create regional databases.
- \* Call it from other applications (DOS only).

AccuMail comes with DOS and Windows version on one CD-ROM disk.

It is also available for both these formats in a Network version.

The program features an easy to use interface that will have you running minutes after installation. You can use AccuMail to lookup individual addresses, or you can have it process a list. AccuMail works directly on ASCII delimited, ASCII fixed-field, dBase III and IV, Alpha Four, CA Clipper, dBXL, FoxPro, Fox Base, Quick Silver and Group 1's ArcList file formats. When using it for individual addresses use the company name if applicable. Many times there may be a plus 4 for an address, but a company at the same address will have a different number.

To work with a list you select New Job from the File Menu; choose the Mailing List option and select the format and your database file. AccuMail will take your database file, correct street

names, add ZIP+4, and generate a USPS Form 3553. Normally, AccuMail will perform address corrections on your entire mailing list. You can create filters to select only certain records (or range of records from your mailing list) for processing.

Working with individual addresses you can search all streets within a specific zip code. You can also search secondary addresses within a given street number. For example, an office or high rise apartment building will contain multiple offices or dwellings. AccuMail, in the case of offices, will supply you with company names within a given building. For apartments it will supply you with all the apartment numbers in that dwelling. For single listing firms AccuMail will, in many instances supply you with the company name, hospital, or even Post Office at that address.

The screenshot shows a 'Lookup' dialog box with the following fields and buttons:

- Name: Bill Gates
- Company: Microsoft Corp.
- Street: 1 Microsoft Way
- Suite: (empty)
- City: Redmond
- State: WA
- Zip+4: 98052 - 6393
- DPC: 014
- Carrier Route: CR29
- Buttons: Lookup, Browse..., AccuMail DB..., Close, New, Print, Print Setup..., Help

The AccuMail National Database, containing virtually every deliverable mailing address in the United States, is a standardized and highly compressed version of the 4.2-gigabyte United States Postal Service file. The National Database remains on the CD-ROM. However, you can select portions of the database to place on your hard drive. If you are going to be working with a specific region you can create a "regional" database to place on your hard drive. This will speed up access as you do not have to search the whole database. You specify a range of zip codes you want to work with, and the file will be copied.

AccuMail will presort your mailings to take advantage of bulk mailings. USPS requires that mailers update their ZIP+4 and carrier route code files regularly. In compliance with USPS regulations, AccuMail does not allow you to run a job or to print

the CASS Form 3553 if you use a USPS National Database that has expired.

AccuMail is released quarterly. The current version 3.0 was released January 15, 1994. It will not process the above information beyond May 15, 1994. The updates are released January 15, April 15, July 15 and October 15. Each update will work for up to 75 days beyond its expiration date.

AccuMail LAN is available with 4 quarterly updates. Price is:  
5-User -- \$3995, 10-User -- \$5995.

#### SYSTEM REQUIREMENTS:

##### DOS

- \* 286 or higher CPU
- \* 2MB RAM
- \* DOS 3.0 or higher
- \* Hard Disk

- \* CD-ROM drive

##### WINDOWS

- \* 386 or higher CPU
- \* 4MB RAM
- \* DOS 5.0 or higher
- \* Hard Disk with about 6MB free space
- \* VGA or higher video
- \* Mouse

## ASCII

(American Standard Code for Information Interchange) Pronounced "ask-ee." A binary code for data that is used in communications, most minicomputers and all personal computers.

ASCII is a 7-bit code providing 128 possible character combinations, the first 32 of which are used for printing and transmission control. Since the common storage unit is an 8-bit byte (256 combinations) and ASCII uses only 128, the extra bit is used to hold a parity bit or special symbols. For example, the PC uses the additional values for foreign language and graphics symbols. In the Macintosh, the additional values can be user-defined to enhance a font. In the Macintosh version of this Glossary, the IBM PC symbols are designed into the font used for the definitions.

## BBS

(Bulletin Board System) Computer system used as an information source and message switching system for a particular interest group. Users dial into the BBS, review and leave messages for other users as well as communicate to other users on the system at the same time. BBSs are used to distribute shareware and may provide access (doors) to other application programs.

## CD ROM

(Compact Disc Read Only Memory) Compact disc format used to hold text, graphics and hi-fi stereo sound. It's like a music CD, but uses a different track format for data. The music CD player cannot play CD ROMs, but CD ROM players usually play music CDs and have headphone and amplifier jacks. A CD ROM player connects to a controller card, which is plugged into one of the computer's expansion slots.

CD ROMs hold in excess of 600MB of data, which is equivalent to about 250,000 pages of text or 20,000 medium-resolution images.

dBXL

dBASE III PLUS-compatible DBMS from WordTech Systems, Inc., Orinda, CA, that features a menu-driven option for interactive use. See Arago dBXL.

## DDE

(Dynamic Data Exchange) Message protocol in Windows that allows application programs to request and exchange data automatically. A program in one window can query a program in another window using the DDE protocol.

DOS

(Disk Operating System) Pronounced "dawss."

Generic term for operating system. Versions include MS-DOS (Microsoft), and PC-DOS (IBM).

## EISA

(Extended Industry Standard Architecture)

Pronounced "eesa." PC bus standard that extends the AT bus to 32 bits and allows bus mastering. It was announced in 1988 as a 32-bit alternative to the Micro Channel that would preserve investment in existing boards. PC and AT boards, which cannot plug into the Micro Channel, can plug into an EISA slot.

ISA

(Industry Standard Architecture) Original IBM bus architecture in PC, XT (8-bit) and AT (16-bit) computers. It has been extended to 32 bits with EISA. Contrast with Micro Channel.

### Micro Channel (MCA)

IBM bus architecture used in high-end PS/2 models, the RS/6000 series and certain ES/9370 models. It is a 32-bit bus that provides bus mastering, but Micro Channel expansion boards are not interchangeable with PC bus boards. Micro Channel boards are designed with built-in identification that eliminates manual switch settings sometimes required with PC bus boards.

It transfers data at 20MBytes/sec and has modes for increasing speeds to 40 and 80MB. Future enhancements may take it to 64 bits and 160MB.

## MPC

(Multimedia PC) Minimum specification for a multimedia PC from Microsoft: 10Mhz 286 or higher CPU, 2M RAM, 30M hard disk, VGA, CD ROM with audio and Windows 3.0 with multimedia extensions.

### MSCDEX Extensions

Software required to use a CD ROM player on a PC running DOS. It usually comes with the player and includes a driver specialized for the player and Microsoft's MSCDEX.EXE RAM resident program.

multimedia

Communicating information in more than one form.  
Includes the use of text, audio, graphics, animated  
graphics and full-motion video.

## OLE

(Object Linking and Embedding) Microsoft Windows compound document protocol. The "client" application creates the document; the "server" application creates an object within the document. When a user double clicks on an embedded object in a client app, the server app is loaded and the appropriate data file is retrieved.

PCMCIA  
(Personal Computer Memory Card International  
Association) Organization of U.S. and Japanese  
companies set up to standardize memory cards.

## Shareware

Software distributed through BBS's and information services free of charge on a trial basis. If you use it, you pay for it, for which you receive additional documentation, support or possibly the next upgrade at no cost. Paid licenses are required for commercial distribution. See freeware and public domain software.

## SYSOP

(SYStem OPerator) Pronounced "siss-op." Person who runs an online communications system or bulletin board. The sysop may also act as mediator for system conferences.

## UART

(Universal Asynchronous Receiver Transmitter)

Electronic circuit that transmits and receives data on the serial port. It converts bytes into serial bits for transmission, and vice versa, and generates and strips the start and stop bits appended to each character.

VESA

(Video Electronics Standards Association)

Organization devoted to improving graphics standards made up of major vendors of PC graphics hardware and software. VESA has standardized extended VGA, or Super VGA, modes. See VGA.

## VGA

(Video Graphics Array) IBM video display standard built into most models of the PS/1 and PS/2 series that provides medium-resolution text and graphics. It has become the common display standard for all PCs.

VGA supports previous EGA and CGA display standards and requires an analog RGB monitor. Its highest-resolution mode is 640x480 with 16 colors, but vendors have boosted colors to 256. VESA (Video Electronics Standards Assn.) has set VGA standards at 256 colors and Super VGA modes of 800x600 and 1024x768 resolutions in both 16 and 256 colors.

## Windows

Graphics-based operating environment from Microsoft that co-exists with DOS. It provides a desktop environment similar to the Macintosh. Different applications, or multiples of the same application, are kept active in windows that can be resized and relocated on screen. Users can switch back and forth between them.

## ASP Advantage CD-ROM

by Tony Curro

If you are reading this article, you have access to a BBS. Besides being a place to communicate, and share ideas with others of like interests, it is also a fount of excellent programs to use on your system. The Association of Shareware Professionals (ASP) is the largest trade group of software publishers, with more than 1,700 members and growing each day. Yes, there are many non-ASP programs available, and quite a few of them are not crippled in any way. However, the ASP standards require all ASP authors must release full, working versions of their software. You will NEVER find a "demo" or crippled product if it carries the ASP logo. You will always receive full documentation, and if there is a problem with an author (either for support, or lack thereof), the ASP Osbudman will help you resolve your differences.

The ASP makes new or updated products available to its many distribution sites. They have recently started to distribute quarterly CD-ROMs. Each disk will contain new and updated programs from that quarter. SYSOPs will be pleased to find a directory on the CD-ROM that will aid them in quickly making these programs available to their users.

ASP Advantage CD-ROM comes with about 1,000 programs, from managing your checkbook and creating a shopping list, to cataloging you video collection and playing a game. You will find programs for both DOS and Windows platforms. Neither of these needs to be installed, but you will greatly speed your searches by doing so. Each platform has its own installation program, which is described in the README.TXT file on the CD-ROM.

For a quick start, type 'GO' from the CD-ROM drive. You can read about the ASP, search categories, copy, and even format a floppy. Using the 'About System' feature you can see what memory, disk space, and graphics card you have installed. The CD-ROM also has a Delta Directory Interface. This interface will show you only updated or new programs since the last ASP CD-ROM. You can copy the files in their archived ZIP format, or have them uncompressed as they are being copied.

Files are stored in many directories. However, you need not concern yourself with this, as you highlight a file or group of files from the list, and then have the program copy them to your hard drive. You will find the files on the CD-ROM in both compressed and uncompressed formats.

Looking over this CD-ROM I found many interesting programs, some of which I plan to review in the future. For those who do not want to spend much time online, call a BBS that does not have a large selection of current files, or if you are just starting out you will find something useful here.

I have seen several of the programs that I have reviewed in the past on this CD-ROM. The CD-ROM is attractively priced. BE ADVISED that purchasing the CD-ROM does NOT mean that you own the enclosed programs. Yes, you can try ALL of them free-of-charge, but if you use them for any length of time, say 21 days or more you should register the program with the author. These are shareware programs, and since you have the opportunity to try-before-you-buy, it is no reason to abuse this privilege. The more people that register a product, the harder the author will work to create a better product. I have spoken to authors who have received dozens, if not hundreds, of requests for support, yet they only have a handful of registrations to show for their work. The CD-ROM should be available in many leading software stores, or order it directly from ASP.

#### SYSTEM REQUIREMENTS:

- \* Memory, video, etc., dependent on the program.
- \* MS-DOS
- \* MS Windows (for Windows applications)
- \* CD-ROM drive
- \* Hard disk not required (but may be needed to install larger programs)

# ATI Graphics Ultra Pro Graphics Accelerator Board

by Tony Curro

ATI has been in business for eight years. They are known for award-winning graphics boards. They also have recently starting releasing modems, sound cards, etc. I took a look at their Graphics Ultra Pro VL-Bus accelerator board.

This board comes in: ISA, EISA, MCA, VLB, and PCI formats. The ISA version also includes a bus mouse. The Graphics Ultra Pro series uses the ATI mach32 graphics and multimedia accelerator chip. This chip speeds up both graphics and sound, using load-in ATI drivers provided with the card.

Features:

- \* ATI FlexDesk, a control panel that lets you configure color, resolution and font size all from the same driver.
- \* Accelerates Video for Windows and other multimedia video applications enabling you to playback video at a larger, more usable size while maintaining smooth motion and audio synchronization. You can adjust the hue, brightness, saturation and contrast of your video through the ATI FlexDesk.
- \* Display Power Management Signaling (DPMS) Support. Users of mach32 products that have a DPMS-compliant monitor can configure DPMS timings using the Windows FlexDesk Control Panel. For DOS users, ATI provides a TSR program.
- \* 26-pin feature connector.
- \* 2MB VRAM.

Drivers included (5 1/4" disk)

- \* MS Windows.
- \* OS/2 Presentation Manager.
- \* AutoCAD, MicroStation and other CAD applications.
- \* Popular DOS application drivers, such as: GEM, Lotus 1-2-3, MS-Word, etc.

Graphics Ultra Pro will work with any VGA, VESA or 8514/a driver. However, for best performance, use mach32 drivers where available.

The VL-Bus card MUST be installed in a 32-bit VESA Local Bus slot running at 33Mhz. The feature connector on the Graphics Ultra Pro VLB version is used for VGA output only. The MicroChannel card operates in either a 16- or -32-bit slot. The 32-bit slot, however, will provide higher performance.

Before you install the card you should remove all memory manager programs. You can also boot from a plain DOS disk for added safety. After you complete the installation you can reactivate you memory manager. Please read the memory exclusion list in the manual to assure that there are no address conflicts between the card and memory managers.

The card performed very well in my system. I achieved WinMarks in excess of 29 Million with the Graphics Ultra Pro. I found the card reliable and stable.

## ShareWare SpotLight

The folks from Software Creations return. They have a new game, and a revamped version of a game previously reviewed in CTM.

### God Of Thunder

v1.0

by Tony Curro

Those folks from Software Creations are back again. They have released their, in my opinion, best and most challenging game to date.

It is 927 A.D. You are Thor, The God of Thunder! Your father is Odin, the most powerful of the Norse Gods and ruler of Asgard. Odin must fall into a deep sleep, every few hundred centuries, to rejuvenate his power. While he is in one of these sleeps, your half-brother Loki, The God of Mischief, conspires with two of his cohorts to take control of Midgard (Earth), and thereby rule the world. Each of the three has set up a seat of power. You must journey to these three towns, defeat each of the Gods, free the citizens, and thereby wrest power from them and return it to Odin. You venture forth with only an enchanted hammer, which faithfully returns to he who throws it. On your journey you encounter citizens who give you clues to help you in your quest. You also face hundreds of creatures out to thwart and destroy you. Several of these creatures cannot be killed. This is the enjoying part of the game. You are faced with dozens of puzzles that must be solved. You have rocks, wood, and other articles in some screens to help you. You must figure out how to use them.

There is no violence, per se, in this game. True, you destroy opponents with your hammer. But, they turn into apples, jewels, or magic that you use throughout the game. No bloodshed. Pay close attention to what people say to you. Pick up anything you can, as it may be needed later in the game.

The game was designed to be challenging, and is more than just destroying everything in sight. You can only save one game per name, and may have to reload if you do not get something needed from an earlier screen.

The shareware version contains Part 1 of the trilogy. You journey to Spegville, where you must defeat Jormangund (the Midgard Serpent) before you can continue. In Spegville you visit the tavern, where the local barkeep can give you pointers in destroying Jormangund. Don't forget to visit the golden arches of McElroy's where you can purchase Dee-licious Golden Apples that restore your health. You eat apples to gain health, but be aware that some you pick up along the way may be poisoned.

When you complete the part, you receive a suit of armor. Then you speak to Dan, the Apple Seller (who bears a resemblance to Dan Linton, SYSOP of Software Creations) about how to complete the trilogy. Or, you can just read that information below. Either way, you would not want to stop here. Get the trilogy, and I guarantee you will not be disappointed. However, as I mentioned, this game requires mental deduction. So if you are just looking for a shoot 'em game, you may find this game a bit taxing. I was addicted to game from the moment I loaded it. Look for GOT100.ZIP or later on many BBSs, or phone Software Creations to get the latest on your first call.

#### SYSTEM REQUIREMENTS:

- \* 80286 or better CPU.
- \* VGA graphics card with at least 256KB video memory.
- \* VGA monitor.
- \* Minimum 1.2MB hard disk space.
- \* 510K available RAM.

#### OPTIONAL:

- \* Sound Blaster or compatible sound card for digitized sound effects & full musical soundtrack.
- \* Adlib or compatible for soundtrack only.
- \* Joystick in port 1.

-----End of God of Thunder-----  
-----See end of file for pricing-----

## Hexagon II

by Tony Curro

Hexagon II is a futuristic Othello-like game. The object is to simply have more pieces of your color on the board at the end of the game. However, even playing at the Easy level, winning this

animated game of strategy is fairly difficult.

The game can be played by two players, or you can take your chances against CRANIAC, the resident computer nerd. A light bulb icon, which changes with each level. At the hard level he is complete with bow tie and glasses. The icon does not do justice to the genius within. He is brutal at all levels of play, and will capitalize on your every mistake.

You each start with two pieces on the board. Clicking on the jewel -- which represents the piece -- you will see arrows showing you spaces you can jump, or clone yourself. The clone feature creates a new piece without removing the old one. In this fashion you can create a line or more of your pieces. Beware if you leave an open space. CRANIAC will quickly jump in, and convert your pieces to his color.

Hexxagon II has many options that you can change or set. Select two player mode, or play against the computer; have sound go to sound card, PC speaker, or turn it off; Set animation to high for some awesome screen animation; Configure Board allows you to experiment with varying game board setups, even choose one of five boards to customize to your liking.

I enjoyed playing the first release of Hexxagon, and am enjoying Hexxagon II even more. Check out either or both of these games. You will not be disappointed. Look for HEXX20.ZIP.

#### SYSTEM REQUIREMENTS:

- \* 80286 or better CPU
- \* VGA display
- \* 640K RAM, with 475K free
- \* Mouse and Sound Blaster or compatible sound card recommended.

# New Grolier Multimedia Encyclopedia

by Tony Curro

We all thirst for knowledge. Browsing through a dictionary, or encyclopedia, constantly broadens our horizons. Using an encyclopedia on a CD-ROM brings the world to life. The Grolier Multimedia Encyclopedia (NGME) for Windows is such a CD. It not only brings the world to life, but makes us feel as if we are actually a part of history.

NGME contains all 21 volumes of the Academic American Encyclopedia, plus additional articles written specifically for NGME. Overall, you will find nearly 33,000 articles (more than 8,000 are new), and comprehensive indexes of all the titles, words, and multimedia features. Thousands of pictures, hundreds of maps, sound, animation, and video, to whet your appetite for knowledge. There are many additional articles written especially for NGME.

A new graphical user interface makes it easy to search or browse through NGME. The CD makes excellent use of MPC with extensive audio and visual displays.

The Multimedia Maps in NGME are animated maps. Explore:

Prehistoric and Ancient People; Exploration and Expansion; Ideas and Beliefs; Early American History; Transportation; Modern Wars and Conflicts. All are presented with narration. It is a wonderful experience. While you are listening to the narration, the map changes to coincide with the information you are hearing. You also see sidebars pop up that further highlight the events. There are over 15 maps in all to explore.

Knowledge Explorer, another new addition to NGME, contains audiovisual essays on topics such as Painting and Sculpture, Space Exploration, and ten other topics. These essays give overviews of broad topics and link them to related encyclopedia articles for further research. For example, in the Painting and Sculpture Essay you will see drawings made over 25,000 years ago on cave walls, view images created by Classic Greek artists, visit great works of the Renaissance, and much more right up to photography and post-modern art forms.

Using Find you can quickly locate the specific information you require. Sound allows you to hear anything from the Nutcracker to various birds and many other sounds.

I was pleased with the overall content, presentation, and performance of The New Grolier Multimedia Encyclopedia. Of the many that I have used, and reviewed, NGME far surpasses them all. As with any reference work, you will discover information here not found in the others, and vice versa. On some topics one encyclopedia will give more information than another. I would prefer to own all the available reference works on the market. But, as that may not be feasible for some, you cannot go wrong with Grolier.

Grolier also makes a DOS, and Macintosh version on CD-ROM. They also offer a 30-day money back guarantee.

## SYSTEM REQUIREMENTS

- \* 386SX or better
- \* MS-DOS 3.3 or higher
- \* MS Windows 3.1
- \* VGA; SVGA recommended
- \* Sound card required for audio
- \* MPC compliant CD-ROM drive (150 KB/sec sustained throughput) for optimal playback of movies and animation.
- \* MS Extensions 2.21 or higher

- \* Hard Disk with at least 1.5MB free space
- \* 4 MB RAM
- \* Printer optional
- \* Network version available.

## News, Updates, and Upgrades

**ZYXEL** introduced the RS-1602E, a new rackmount system for ZyXEL's U-1496RE and U-1496RE Plus modem cards. The rackmount system was specifically designed for the demanding needs of the BBS marketplace. The RS-1602E is now available with a SRP of \$799. The company is offering special SysOp pricing for the Rackmount System and the modems. These offers are available to SysOps in the US, Canada, and Mexico. For further information, call (714) 693-0808; BBS (714) 693-0762.

**2010 SOFTWARE CORPORATION** announced an enhanced version of its file-finding and management software for Microsoft Windows 3.1. Sherlock 2.0, which is now shipping for \$139 for single users and \$695 for a ten-station LAN-pack, allows the user to easily locate files on individual systems or across networks by utilizing 254 character file descriptions and other file access fields as opposed to relying on standard eight character file names.

**BRODERBUND SOFTWARE** made several announcements this month. They released the Multimedia PC version of Myst, the award-winning surrealistic adventure game designed to deliver the power and promise of multimediacomputing (CD-ROM), with more to explore than any compact disc game to date. It carries a street price of around \$55.

They also announced that their best-selling and award-winning product Print Shop Deluxe is going to CD-ROM. The Print Shop Deluxe Ensemble, available on CD-ROM for Windows, contains: The Print Shop Deluxe, PS Deluxe Companion, PS Deluxe Sampler, Business, and Comic Characters, plus a bonus of 50 graphics. You get 5 complete programs on CD-ROM with a street price of around \$80. This will give you over 1,000 graphics, 73 fonts, and more than 3,500 combinations of text shapes and styles.

**COMPTONS NEWMEDIA** revealed new pricing for the 1994 version of Compton's Interactive Encyclopedia for Windows and Macintosh. The company announced the new aggressive retail price of \$149.95. It previously carried a SRP of \$395.00. Compton's is striving to make reference materials affordable to all users.

They also announced two CD-ROMs that will ship in the third quarter of 1994: Babylon 5 - The Universal Encyclopedia, which is based on the television series, and is produced in conjunction

with Warner Bros.; and another joint venture with Warner, John Lennon. The John Lennon CD-ROM will be available in a regular special collector's edition.

**CENTRAL POINT SOFTWARE** announced it will ship a native version of the popular MacTools disk utility simultaneous with Apple Computer Inc.'s introduction of Macintosh with PowerPC systems the first half of 1994. MacTools v3.0 for Macintosh with PowerPC will be the first disk utility program available specifically designed and engineered to take full advantage of the accelerated performance of PowerPC technology. It will carry a SRP of \$149.95. Registered users of MacTools 3.0 can upgrade to the new release for a disk replacement cost of \$9.95( plus \$5.00 S/H). Upgrades from previous versions is \$49.95( plus \$7.50 S/H). In US, and Canada, call 1-800-964-6896.

They also started shipping Central Point Anti-Virus 2.0 for Windows. This new version will scan compressed files, as well as disk compression formats such as STAC and DoubleSpace. It has a SRP of \$129.95.

**HAYES MICROCOMPUTER PRODUCTS** announced the availability of ACCURA 28800 V.FC FAX (ACCURA 288 V.FC + FAX, its fastest, low-cost, data and fax modem designed for personal or home office use. The external modem is bundled with Smartcom for Windows LE and Smartcom Fax for Windows communications software, and is a SRP of \$3399 (US) and \$559 (CDN).

**CINEROM,INC.** announced it has begun shipping its first interactive multimedia title. The Gospels, A Multimedia Guide to the Bible, uses SoftVideo playback technology, which requires no external hardware other than a CD-ROM player and sound card to generate full-motion video. The DOS-based title retails for \$49.95.

**GROLIER** announced several CDs that cover a variety of subjects. 1994 Guinness Multimedia Disc of Records has a SRP of \$49.95. Wyatt Earp's Old West, due this fall, will be available for Windows/MPC and Macintosh platforms, and carries a SRP of \$49.95. Prehistoria - A Multimedia Who's Who of Prehistoric Life is shipping with a SRP of \$89.95. Prehistoria will contain Knowledge Explorer Audio-Visual Essays, a feature found in their award-winning Multimedia Encyclopedia.

**PAPERDIRECT** has announced a new printing utility. Make-A-Booklet, using a laser printer, PC and MAC users can transform ordinary single-sided documents into full-color, professional multi-page

booklets with copy on both sides. The package, including software and paper, retails for \$49.95. Call 1-800-A-PAPERS to receive a catalog, or to place an order.

**WORDPERFECT** made several DOS announcements this month. They have announced WordPerfect 5.1+ for DOS, an upgrade to WP 5.1 for DOS targeted at users on lower-end machines who want new functionality but lack the hardware for WP 6.0. The upgrade price has been reduced to \$49.95, and is scheduled to ship the end of March, 1994.

Also released was WordPerfect 6.0b for DOS. WP 6.0 for DOS users can get the new release for price of disks and shipping. Call 1-800-321-4566.

## Opening Format

This month I would like to start off with an apology. Last month I asked readers to leave a message to the forum moderator at America OnLine. My magazine was up, and they just as quickly removed. I do now have a download area in the Telecom Forum. The creation of the area was due to the help of Glenn Brensinger. However, Glenn can only do so much. The rest is up to AOL. They will do it at their speed, and is no reflection on the job Glenn is doing. I was in contact with several companies and told them, rightfully so, that the files were available. They called me back to tell me they could not find them. Yes, they were removed as stated above. My credibility was not that great. So I took the stand I did here. When I called to upload the last issue, I found in the interim the area had been created. So, once again I would like to apologize to Glenn for any undue problems it may have caused.

Spring is here, and with it some hot reviews from CTM, especially in the shareware department. This month we look at:

Hardware: ATI Graphics Ultra Pro, Practicard PCMCIA fax/modem.

Software: Q&A for Windows, Winfo Pro for Windows. We also look at a company that will reproduce your signature.

CD-ROM: Grolier Multimedia Encyclopedia, AccuMail, Tetris Gold, ASP Advantage.

Shareware: Releases from Software Creations.

In coming months, I have the new Hayes Accura 288 Fax/modem, HP DJ560C color printer, Norton Utilities 8.0, Norton Desktop for Windows, PC Tools 2.0 for Windows, PC Tools 9.0 for DOS, and much more.

We are nearing the end of our second year online, and the future is looking very bright. We are around 300 BBS that receive CTM each month, and have noticed a huge number of downloads on AOL. We are also on CompuServe, and working on getting access to the Internet. I have already received an inquiry from Italy wishing to distribute CTM there if they could get it from the Internet. Hopefully they will be able to soon.

Until next month.

Tony Curro...

---

## Sign In

by Tony Curro

Every letter we send out has our signature on it. If you send out a multitude of letters, the amount of time you spend signing your name, not to mention the cramps you may experience, can cost you money.

Orbit Enterprises has the solution to your problem. Mail them your signature and they will return either a TrueType font for Windows, a HP LaserJet format font for DOS or both. These are digitized signatures. What is a digitized signature? The answer from Orbit: A digitized signature is a person's hand-written signature that has been reproduced in its identical form with a scanner. It can be used within any computer software programs, giving the impression that your letters and documents have been personally signed. Your digitized signature can be stored on a computer disk until needed, then can be easily inserted into documents that are printed on your laser printer to save time and effort.

I received the Windows TrueType font. Installation was quick following the simple instructions provided. Within minutes I added my signature as a permanent part of a template I use in MS Word for Windows. I just print a letter, and place it in an envelope ready for mailing. No more having to sign the letter. I find it extremely useful for those times when I cannot actually sign a document. I use WinFax Pro, and a fax modem. When I fax someone from my computer, I cannot sign the letter or note. With my signature as a font, I NEVER have that problem, and the document looks as if I used a stand alone fax machine to send it.

Signatures are usually processed within three working days from the time Orbit receives it. However, you can have it done overnight by sending it to them that way, and paying the additional shipping charges.

Orbit does more than signatures. You can have an image scanned, or even several lines of text. Lets say you wanted to add a personal touch to letters, by having a line such as: We always wish to please our customer, and then your signature. Orbit charges each line as a signature, so in this case of two lines you would pay at the rate of two signatures. If you have multiple

signatures Orbit will give you a discount. You can also save by creating both a DOS and Windows version of your signature or saying.

I was extremely pleased with the quality of the returned signature I received from Orbit. If you are not satisfied, they offer a 30-day, money-back guarantee.

## PractiCard 144

by Tony Curro

Computers are getting smaller and smaller. We now have some that fit in the palm of your hand. Devices to use in them also have to shrink. I recently looked at a modem that could fit in my wallet. As a matter of fact it is about the same size as a credit card. Don't let the size fool you, as this is one powerful modem. The modem measures 3.4" X 2.2" X 0.2".

Practical Peripherals, maker of award-winning modems, has PractiCard 144 modem with fax. This modem supports the PCMCIA 2.0 standard, and is compliant with Type II and III laptop computers, as well as palmtops. The package includes both DOS and Windows software for communications as well as faxing.

I tried it with the built-in communications software in my computer. I plugged the card in and ran my software. It worked perfectly right out of the box. It has a connector that plugs into the modem after it is installed on your computer. You then plug your phone line into this cable. For palmtops, that have only one slot and therefore limited storage capability, the software was not able to be installed. For those units that have a built-in hard drive, or two PCMCIA slots this is not a problem. I was still able to send faxes by downloading a small piece of fax software that is available on Practical's Forum on CompuServe.

Features include:

- \* QuickLink II Data/Fax software for Windows and DOS.
- \* 14400BPS v.32bis DATA transmission
- \* 14400BPS send/receive fax
- \* v.32bis, V.42bis data compression, V.42 error control.
- \* DTE rates up to 115,200bps
- \* Transfers alphanumeric numbers to their numeric equivalents.

PractiCard 144 has an internal 16550 UART, and has six pages of on-line help in the card's ROM. This modem is as powerful as its desktop counterpart, and has many of the same features you expect in a fax modem. These include: Broadcast faxes, send/receive log, auto dial/answer, import/export text and graphic files.

PractiCard 144 saves batteries by drawing less than 20 milliwatts in its software-controlled "sleep" mode. With many of these devices it is advisable, where possible, to use your system's AC power supply. Also, you may consider removing the modem from the unit when not in use.

PractiCard 144 comes in a protective case, and has a Limited Lifetime Warranty.

## Q&A 4.0 for Windows

by Tony Curro

Symantec has a long history with Q&A. In 1985, Q&A 1.0 for DOS was released. It quickly set the standard for flat-file databases with its natural language interface and integration of a complete word processor for mail merges. Yes, I remember it well. I purchased that first version. Selecting fonts in Q&A Write was not as easy as it is today. Then again personal computing was still in its infancy, and many things were not as easy as they are today.

Q&A 4.0 is the third major release, but Q&A 4.0 for Windows is the first major release on that platform.

A complete installation of Q&A 4.0 for Windows requires approximately 20MB of hard disk space. This includes Q&A Write, tutorials and templates. You can select a custom installation to install only the features you want.

Q&A will import dBASE, Paradox, and other files. You only have to select import, give it a Q&A filename, and import. If the Q&A file does not exist you are asked if you wish it to be created. You will then see the import fields. You do not have to create them. Just select them, and the file is imported.

Q&A for Windows is network-ready and requires no additional effort to install. It is also fully interoperable with Q&A for DOS. In a mixed DOS/Windows corporate environment, workgroups can share the same Q&A databases and access them concurrently from either platform over a network. This also makes the switch from DOS to Windows painless.

The Windows version retains many of the features of the DOS-based product. You still have the familiar spreadsheet view. Options have been simplified by the inclusion of a button bar in the Windows version. Many of the features and options are quickly selected by a mouse click.

Q&A Write has also been improved. Along with standard features found in all word processors, it includes a built-in outliner, spell checker and thesaurus, a table generator, OLE and DDE

support, fax and electronic mail enabling, automatic envelope creation, editable page views, a customizable tool bar, graphic frames and more. The mail merge features have also been enhanced.

You can generate a variety of reports, create freeform reports and forms, select from pre-defined Avery labels, or create your own in a graphical environment. Add a picture field to any form, and even have different colored text.

Another new addition to Q&A is DAVE (Do Anything Very Easily). Q&A first had intelligent assistant in its first release. This allowed you to search for things using plain English phrases. Now DAVE is here to assist you. He will also search for things as described above. Or use DAVE, your scripting assistant, to create scripts for repetitive database tasks using the same easy English interface.

Overall, Q&A for Windows is a pleasure to work with. Its ease-of-use coupled with the built-in Q&A Write, make it a good choice.

# Tetris Gold CD-ROM

by Tony Curro

The best thing to EVER come out of Russia was Tetris, although caviar and vodka should be right up there. However, Tetris is non-fattening and does not contain alcohol. It is the best choice over the other two and is much cheaper. Tetris is habit-forming though. Once you start playing it you keep saying, "One more game, just one more, just one more..." I was hooked the first time I played the original version. Since that time there have been many Tetris-like games available both commercially, and via shareware. Spectrum Holobyte, the original releaser of Tetris has even brought us several sequels (more later).

To celebrate the 5th year of Tetris Spectrum has released a Special Commemorative Edition CD-ROM named, Tetris Gold. This CD-ROM contains games for three platforms: MS-DOS, Windows, and Macintosh. In addition it contains the complete Tetris line released by Spectrum Holobyte, the never before released MS-DOS prototype of Tetris, and a special 10-minute interview with Alexey Pajitnov, the Russian creator of Tetris.

Tetris, and its sequels, is a simple, yet challenging game. For those not familiar with it, the concept is to form rows of blocks. As you form a row, it is removed and you are awarded points. You must remove a specific number of rows before you proceed to the next level. With the sequels, each game has a different theme, but the same basic concept. Some of the games support sound cards. The CD-ROM includes online manuals for all the games.

The Tetris Gold CD-ROM collection includes the six versions of Tetris, and the MS-DOS based prototype. Below is a description of the games of Tetris, and the platforms supported for the games. Not all platforms supported for all games.

\* Tetris (MS-DOS, MAC), the original game that started the craze. Manipulate blocks to form complete lines. The pieces fall faster with every new level, and there are 10 levels to play.

\* Welltris (MS-DOS, MAC), the first sequel. Pieces fall into a four-sided well with grid-like walls and bottom. Moving pieces

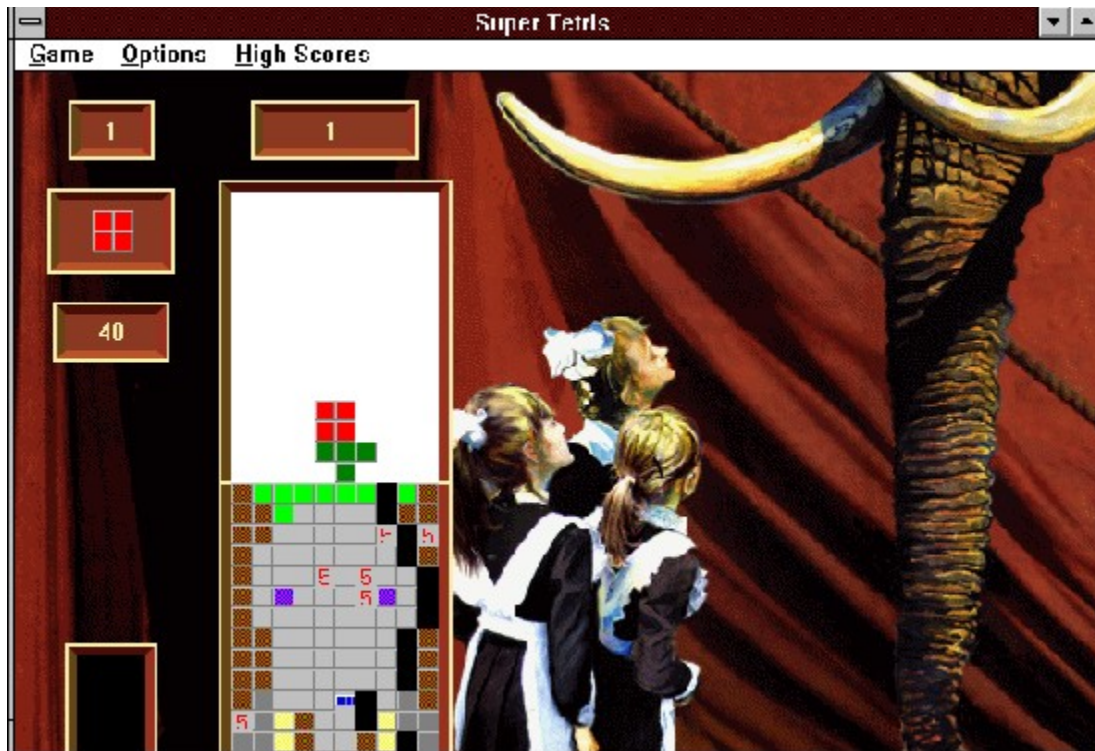

may be rotated and moved from wall to wall within the well. Earn points by forming solid rows either horizontally or vertically on the bottom of the well.

\* Faces...Tris III (MS-DOS, MAC), is slices of peoples faces: chins and lips, eyes, and head. You must stack the pieces in proper order from chin to forehead to earn points.

\* Wordtris (MS-DOS, MAC), has players manipulate single letters that fall from the top of the screen. The objective is to form words with letters that have already fallen. Wordtris recognizes over 60,000 words. More points are awarded for longer or more complex words.

\* Tetris Classic (MS-DOS, Windows), is the original updated with brilliant VGA graphics and enhanced game play. It features dual-pit competitions and double-wide cooperative games. Classic also features beautifully rendered graphics depicting Alexander Pushkin's famous fairy tale Ruslan and Ludmilla and a soundtrack based on the opera.

\* Super Tetris (MS-DOS, MAC, Windows), contains the familiar falling squares will presenting explosive new challenges. Work your way through deep scrolling pits filled with falling bombs and hidden treasures. This version includes two-player modes and timed games.

As a Tetris addict, I highly recommend this CD-ROM to everyone. You are getting six games with multiple platform support, which assures you of being able to play it almost anywhere, and a price that is just about what you would normally pay for one or two games.

#### SYSTEM REQUIREMENTS:

##### DOS

- \* 80386-16MHz
- \* 640K RAM
- \* DOS 5.0 or later
- \* Hard Drive
- \* VGA
- \* Mouse
- \* CD-ROM drive
- \* Joystick, Sound Card (optional)

##### Windows

- \* Windows 3.1 or later
- \* 2MB RAM
- \* VGA
- \* 80386-25MHz, Super VGA, Sound Card (optional, but best for optimal)

performance)

Macintosh

\* 4MB RAM

\* System 7

\* Hard drive

\* CD-ROM drive

Mac Plus or later for black-and-white graphics. Color Mac requires 256-color graphics (color also needed for video interview). Sound effects and music not compatible with AV models.

# Winfo Pro for Windows

by Tony Curro

Winfo Pro is a personal information manager (PIM). It will manage your phonebooks, both personal and business, and allow you to dial an entry. It also contains a calendar, to do list, and several database formats to keep track of many other things. You can inventory your valuables; catalog your videos, music collection and software library; make a shopping list; store recipes, and much more.

Installation requires little disk space. Once started you will have the sample phonebook on screen. You can change the view of this and all the other screens that you see. View personal or business contacts, or both.

Using Winfo Pro's Design feature you can fully customize your databases. Create your own, or change one of the existing databases. Add or delete fields, set up the screen to your specifications, even change text font and color, and background screen color.

Winfo Pro comes with: predefined Phone Book and Address Manager, Calendar with integrated To Do Lists, Alarms, Customizable Views, Reports, and Screens, plus much more. In all there are 11 predefined databases. Alarm features several dozen sounds that will play to remind you of an event. Hear anything from 1812 Overture and Oh Christmas Tree, to Wedding Song and Marsellaise.

The program supports color printing, and has extensive printing capabilities that include: Saddle Stitch Phone Books, Daily Planners, Rotary cards, Labels, Envelopes and more. This makes taking along any of your information very simple.

Winfo Pro has DDE link support to WinFax Pro. This means you can use any phone numbers from Winfo directly in WinFax Pro.

Other features of Winfo Pro include:

- \* Custom Envelopes
- \* ASCII import and export
- \* OnLine Help
- \* Mail Merge capabilities
- \* Custom Printer Fonts

SYSTEM REQUIREMENTS:

- \* MS Windows 3.1
- \* 3.5" HD drive (5.25 disk available)
- \* Mouse
- \* 1.5MB disk space
- \* Optional: modem for Auto Dialer
