

#¹ \$² **Error System Help**

This help provides information on the errors that may happen while you are running a Visual Basic program. It provides an indication of the cause of the error and what possible actions you may be able to perform to correct the error.

Help is provided on the following types of errors:

Unrecoverable Errors

Recoverable Errors

Error 6 - Overflow

Out of Memory Errors

Error 11 - Division By Zero

Error in Loading DLL or Custom Control

Error 53 - File Not Found

Error 57 - Device I/O Error

Error 58 - File Already Exists

Error 61 - Disk Full

Error 64 - Bad File Name

Error 67 - Too Many Files

Error 68 - Device Unavailable

Permission Denied

Error 71 - Disk Not Ready

Path/File Access Error

Error 76 - Path Not Found

DDE Errors

Error 282 - No Application Responded To a DDE Initiate

Error 283 - Multiple Applications Responded to DDE Initiate

Error 320 - Can't Use Character Device Name

OLE Errors

Error 31023 - Invalid or Unknown Class

Printer Errors

Help Errors

ODBC Errors

Data Access Errors

DataBase Lock Errors

Error 3022 - Can't Have Duplicate Key

Invalid Account Name or Password Errors

Error 3049 - Database is Corrupted

Error 3050 - SHARE.EXE errors

Error 3058 - Can't Have Null Value In Index

Database Permission Errors

Null Errors

Error 3170 - Couldn't Find Installable ISAM

1# INDEX

2\$ Error System Help

#³ \$⁴ K⁵ K⁶ K⁷ K⁸ K⁹ K¹⁰ K¹¹ **Unrecoverable Program Errors**

Cause

This class of errors is created by a programming error that leads to a error condition that typically can not be recovered from.

Action

Report this problem to the developer by creating and printing a problem report. Please provide as much information as possible about what you were doing that lead up to the error condition.

You will probably have to Abort the program. Occasionally you may be able to skip the error and continue. However, the program is not likely to function correctly after doing so.

#¹² \$¹³ K¹⁴ K¹⁵ K¹⁶ K¹⁷ K¹⁸ K¹⁹ K²⁰ K²¹ K²² K²³ **Recoverable Program Errors**

Cause

This class of errors is created by a programming error that leads to a error condition that typically can be recovered from.

Action

Report this problem to the developer by creating and printing a problem report. Please provide as much information as possible about what you were doing that lead up to the error condition.

You will probably be able to skip the error and continue with minimal, if any, affect on the operation of the program. However in some cases, the program may not function correctly after doing so or may lead to incorrect or unexpected results.

12# RecoverableErrors

23K Error30019;Error32755

#²⁴ \$²⁵ K²⁶ **Error 6 - Overflow**

Cause

This error is created by a value becoming greater than expected and exceeding the maximum established for this type of field.

Action

Report this problem to the developer by creating and printing a problem report. Try to identify the field value(s) that may be exceeding the maximum.

You can try to skip this error. Either the maximum value or zero will probably be substituted for the invalid value. This may cause the program to not function as expected or provide incorrect results.

24# Error6

25\$ Error 6 - Overflow

26K Error6

#²⁷ \$²⁸ K²⁹ K³⁰ K³¹ **Out of Memory Errors**

Cause

There is not enough memory remaining to perform the requested function.

Action

Reduce the amount of memory currently in use by ending some other applications and then press the Retry button to retry the function.

If ending other applications does not correct the problem press the Abort button. Then restart the system and retry the function that originally created the problem.

If all attempts to eliminate the problem are unsuccessful then report the problem to the developer by creating and printing a problem report form and sending it to the developer.

27# Error7

28\$ Out of Memory Errors

31K Error32765;Error3035;Error3038;Error3178

#³² \$³³ K³⁴ **Error 11 - Division By Zero**

Cause

This error is created by a condition that lead to a division by zero. This may be caused by not entering required data in some cases.

Action

This problem should be reported to the developer so they may add code to the program to prevent the division by zero error from happening. You can do this by pressing the Create a Problem Error Report button and printing the problem report.

You may try skipping this error. Zero or the maximum value allowed will probably be substituted for the result. This may cause unexpected results from the program.

32# Error11
33\$ Error 11 - Division By Zero
34K Error11

#³⁵ \$³⁶ K³⁷ **Error 48 - Error in Loading DLL or Custom Control**

Cause

An error has occurred in loading a Dynamic Link Library module or custom control for this program. This may be caused by a failure in the installation process.

Action

If the installation process was not successful press the Abort button to end this application and then re-install the system.

If this error reoccurs press create a problem report and print it for the developer.

35# Error48

36\$ Error 48 - Error in Loading DLL or Custom Control

37K Error48,Error363;Error441;Error648

#³⁸ \$³⁹ K⁴⁰ **Error 53 - File Not Found**

Cause

The file indicated was not found. This is probably caused by entering an invalid file name. It may also be caused if some of the system files were not installed correctly.

Action

If the problem is a result of you specifying an invalid file name restart the application and specify a correct name.

If the installation process had problems re-install the system.

If the problem keep reoccurring then create a probelm report and print it for the developer.

38# Error53

39\$ Error 53 - File Not Found

40K Error53

#⁴¹ \$⁴² K⁴³ **Error 57 - Device I/O Error**

Cause

This error is created by an Input/Output error on a device, e.g. floppy disk drive, etc.

Action

Check the device and the media to insure they are setup properly. This may be caused by bad media, e.g. floppy disk, etc. Try a different disk, etc. if possible.

After attempting to correct the problem press the Retry button.

41# Error57

42\$ Error 57 - Device I/O Error

43K Error57;Error3040

#⁴⁴ \$⁴⁵ K⁴⁶ **Error 58 - File Already Exists**

Cause

This specified file already exists.

Action

Specify a different file name if possible.

If you want to use this file name either rename or delete the current file with this name.

44# Error58

45\$ Error 58 - File Already Exists

46K Error58

#⁴⁷ \$⁴⁸ K⁴⁹ **Error 61 - Disk Full**

Cause

The disk you were writing to is full.

Action

If possible delete some of the files on the disk to make additional room. Then press the Retry button to attempt to continue the function.

If you are writing to a floppy disk you may be able to use a different disk and retry the function.

47# Error61

48\$ Error 61 - Disk Full

49K Error61;Error3026;Error3183

#⁵⁰ \$⁵¹ K⁵² **Error 64 - Bad File Name**

Cause

The file name specified is an invalid file name. This may be caused by you entering a file name that doesn't follow the DOS file naming conventions. Valid DOS file names are up to eight characters/digits (the first of which must be an alphabetic character) followed by a period (.) and up to 3 characters/digits (the first of which must be an alphabetic character).

Action

If possible specify a different file name that follows the file naming conventions. It may be necessary to abort this run and perform the function again.

50# Error64
51\$ Error 64 - Bad File Name
52K Error64;Error20477;Error3055

#⁵³ \$⁵⁴ K⁵⁵ **Error 67 - Too Many Files**

Cause

This error is created by the system opening more files than have been allowed for by the operating system.

Action

First attempt to close files in other systems or close other applications and then press the Retry button.

The maximum number of files can be increased by increasing the FILES= parameter in your CONFIG.SYS file. Consult your DOS documentation or local support staff for additional information.

53# Error67
54\$ Error 67 - Too Many Files
55K Error67;Error3042

#⁵⁶ \$⁵⁷ K⁵⁸ **Error 68 - Device Unavailable**

Cause

The device that the system is attempting to use is not available. This may be caused by specifying an incorrect device address, e.g. floppy disk drive, etc.

Action

Insure all devices that the system would be using are properly connected and turned on.

You can press the Retry button to attempt the operation again.

56# Error68

57\$ Error 68 - Device Unavailable

58K Error68

#⁵⁹ \$⁶⁰ K⁶¹ **Error 70 - Permission Denied**

Cause

This error was probably caused because you do not have the permission (authority) level required to perform the attempted operation on a file the system is using.

Permission (authority) levels are usually administered by your Local Area Network (LAN) administrator or security administrator.

Action

Contact your LAN or security administrator to have them provide the necessary level of permission (authority) to the files used by the system.

59# Error70

60\$ Error 70 - Permission Denied

61K Error70;Error3107;Error3108;Error3109;Error3110;Error311

#⁶² \$⁶³ K⁶⁴ **Error 71 - Disk Not Ready**

Cause

The disk the system is attempting to use is not ready.

Action

Insure the floppy disk is inserted in the diskette drive correctly and fully.

Press the Retry button to attempt the operation again.

62# Error71

63\$ Error 71 - Disk Not Ready

64K Error71

#⁶⁵ \$⁶⁶ K⁶⁷ **Error 74 - Path/File Access Error**

Cause

This error is probably caused by specifying an incorrect or non-existent path and/or file name.

Action

Change the path/file name if possible to a correct file name and/or existing path.

It may be necessary to abort the system and then perform the function again with a correct path/file name.

65# Error74

66\$ Error 74 - Path/File Access Error

67K Error74

#⁶⁸ \$⁶⁹ K⁷⁰ **Error 76 - Path Not Found**

Cause

This error is probably caused by specifying an incorrect or non-existent path name.

Action

Change the path name if possible to a correct and/or existing path.

It may be necessary to abort the system and then perform the function again with a correct path/file name.

68# Error76

69\$ Error 76 - Path Not Found

70K Error74

#⁷¹ \$⁷² K⁷³ K⁷⁴ K⁷⁵ **DDE Errors**

Cause

This error is created by a failure in the DDE communications with another application.

Action

Attempt to correct the error condition if it's cause is apparent from the error message.

Attempt to retry the function a few times. If this does not resolve the problem create a problem report and abort the application.

71# ErrorDDE

72\$ DDE Errors

73K Error280;Error281;Error284;Error285;Error286;Error287

74K Error288;Error289;Error290;Error291;Error292;Error293

75K Error294;Error295;Error296;Error297;Error298

#⁷⁶ \$⁷⁷ K⁷⁸ **Error 282 - No Application Responded To a DDE Initiate**

Cause

Another application failed to respond to this application's request to start a DDE conversation. This may be because the required application is not present on your system. Or it may be caused by problems in starting the required application.

Action

Insure the required application is installed on your system. You may try starting the application yourself and then Retry this function.

76# Error282

77\$ Error 282 - No Application Responded To a DDE Initiate

78K Error282

#⁷⁹ \$⁸⁰ K⁸¹ **Error 283 - Multiple Applications Responded to DDE Initiate**

Cause

There are multiple copies of the requested DDE application running at this time.

Action

Switch to and end the last occurrence(s) of the requested DDE application. A single (the first) occurrence of the application should remain running. Then press the Retry button to attempt the function again.

79# Error283

80\$ Error 283 - Multiple Applications Responded to DDE Initiate

81K Error283

#⁸² \$⁸³ K⁸⁴ **Error 320 - Can't Use Character Device Name**

Cause

A character device, e.g. PRN, LPT1, etc. may not be used at this point.

Action

Specify a valid file name that does not reference a character device, e.g. PRN, LPT1, etc.

82# Error320

83\$ Error 320 - Can't Use Character Device Name

84K Error320

#⁸⁵ \$⁸⁶ K⁸⁷ K⁸⁸ K⁸⁹ K⁹⁰ K⁹¹ K⁹² K⁹³ K⁹⁴ **OLE Errors**

Cause

This class of errors is created by an error condition in an Object Linking & Embedding (OLE) Function. The specific type of error is indicated in the message.

Action

Try to correct the problem if it's cause can be determined from the error message.

Retry the function multiple times. If the problem persists create and print a problem report for the developer and then abort the program.

85# OleErrors

86\$ OLE Errors

159K Error3296;Error3297;Error3298;Error3299

#¹⁶⁰ \$¹⁶¹ K¹⁶² K¹⁶³ K¹⁶⁴ **Database Lock Errors**

Cause

The function being attempted requires that the database be "locked", e.g. made available for your exclusive use. Currently another user or function has the database open so it can't be locked for your exclusive use.

This problem may be caused by high activity rates on your network at times.

Action

Attempt to retry the function a few times to see if the problem was a temporary one caused by high activity.

If possible have other users terminate the application(s) that are using the database. Terminate any applications or functions within this application that are using the database. Then Retry the function.

Some functions, e.g. database reorganizations, repairs, etc. require that a single user be accessing the database. If you are attempting this type of function try to schedule these activities at a time when other users are not likely to need the database.

160# DatabaseLockErrors

#¹⁷¹ \$¹⁷² K¹⁷³ **Error 3049 - Database Is Corrupted**

Cause

The database indicated has probably become corrupted. This can happen if a application that is writing to this database aborts in the middle of an operation.

It is also possible that the file you are referencing is not a Visual Basic Database at all.

Action

If you are referencing an invalid file correct the file name.

Use the "Repair" or "Compress/Reorganize" function within the application to attempt repair of the database that is in error.

#¹⁷⁴ \$¹⁷⁵ K¹⁷⁶ **Error 3050 - SHARE.EXE errors**

Cause

In order to provide multiuser access to database the program SHARE.EXE (or an equivalent program) must be loaded in the system.

Action

The program SHARE.EXE should exist in your DOS directory. SHARE can be started by entering the following command SHARE /L:500 at the DOS prompt or you can add it to your AUTOEXEC.BAT file. Consult your application support staff if you need assistance with this function.

#¹⁷⁷ \$¹⁷⁸ K¹⁷⁹ **Error 3058 - Can't Have Null Value In Index**

Cause

An attempt was made to add a record with a Null (empty) value in a key field.

Action

Enter a value into all key fields in the record.

179K Error58

#¹⁸⁰ \$¹⁸¹ K¹⁸² K¹⁸³ **Database Permission Errors**

Cause

This error was probably caused because you do not have the permission (authority) level required to perform the attempted operation on the database the system is using.

Permission (authority) levels are usually administered by your Local Area Network (LAN) administrator or security administrator.

Action

Contact your LAN or security administrator to have them provide the necessary level of permission (authority) to the databases used by the system.

183K Error3112

#¹⁸⁴ \$¹⁸⁵ K¹⁸⁶ **Null Errors**

Cause

A null (empty) value is not valid in this context.

Action

If you are entering values for fields enter a value.

This error can usually be skipped to allow the program to continue. If the error persists create and print a problem report form for the developer so they can add code to prevent this error from happening.

186K Error3162

#¹⁸⁷ \$¹⁸⁸ K¹⁸⁹ **Error 3170 - Couldn't Find Installable ISAM**

Cause

The system could not find the database drivers required to access a database. Normally these drivers are located in the windows system directory. The location of these drivers must be defined in the INI file for the application.

Action

Insure that the application has an INI file in your windows directory. Also insure that it has entries for the installable ISAM drivers you will be using. Contact the developer and/or your local application support staff for assistance in setting up a proper INI file for the application.
