

## QuikGraf File List

Most of the files on the enclosed diskette are compressed and cannot be installed directly. If you want to uncompress the files yourself you can use the DOS program EXPAND.EXE that was placed in your \WINDOWS directory when you initially installed Windows.

Here's a list of the files on the QuikGraf installation diskette and where they get installed. This documentation file uses the default name of \QKGRAF10 for the directory to contain QuikGraf, but you can specify any directory name you like during the installation process.

Compressed Name	Uncompressed Name	Description	Final Location
	FILES.WRI	This file	Stays on floppy
	SETUP.EXE	Installs QGSETUP.EXE and VBRUN300.DLL	Stays on floppy
	SETUP.LST	Used by SETUP.EXE to identify files to uncompress and copy to your hard disk	Stays on floppy
QUIKGRAF.EX_	QUIKGRAF.EXE	The QuikGraf program	\QKGRAF10

GSW.DL_	GSW.DLL	Creates QuikGraf's graphs	WINDOWS\SYSTEM
GSW.EX_	GSW.EXE	Creates QuikGraf's graphs	WINDOWS\SYSTEM

Note that you only have to run SETUP.EXE once. If, after running it to originally install QuikGraf, you need to re-install QuikGraf, you can simply run the program QGSETUP.EXE which you will find in your \WINDOWS directory. QGSETUP.EXE is what really installs QuikGraf; all SETUP.EXE does is copy QGSETUP.EXE and VBRUN300.DLL to your hard disk and then run QGSETUP.EXE.
