WinX: Windows Extensions

To install WinX: Create a directory for it on your hard disk, such as "C:\ WINX", and copy the WinX distribution files to it (a brief readme file "readme.txt", this file "winx.wri", the executable "winx.exe", its DLL "winxdll.dll", and the Windows help file "winx.hlp").

Before running WinX: Please keep in mind that, while WinX is running, certain user interface characteristics of Windows will be modified. Most noticably, windows on the desktop will automatically activate when the mouse cursor moves over them, and the activated windows will not pop to the front as they would normally. To change a window's depth (Z position), place the mouse cursor on a window **border** or **title bar**. Click the mouse **left** button to pop the window to the front. Press the mouse **right** button to pop up a menu of commands which move the window backwards and forwards. Equivalent keyboard command keys are also provided.

To run WinX: There are no special instructions for running WinX. Simply use the Program Manager (select Run... in the File menu, then hit the Browse... button to locate and select the WinX executable "winx.exe"). To run WinX automatically upon startup, add it to the Startup group in the Program Manager--typically it is run minimized (open the Startup group window, select New... in the File menu, create a new Program Item by hitting OK, hit the Browse.... button to locate and select the WinX executable "winx.exe", check the Run Minimized box).

Help for WinX: Although WinX is easy to use, it is suggested that you spend a few minutes reading over the online help manual (hit the Help... button on the WinX main window). It provides an overview of what WinX is and how to use it, detailed explanations of its features and controls, and instructions on how to contact the author for questions, comments, and shareware registration.

Registering WinX: WinX is distributed as shareware. If you find this product useful please register it by following the instructions in About WinX (hit the About... button in the WinX main window, or jump to the About WinX topic in the online help manual).

Thank you for trying WinX,
