

## MACROS NOT ON THE KEYBOARD

Some macros in the FREE Keyboard library are not on the FREE Keyboard. They are in the library for various reasons.

**COUNT** Counts the usage of a macro. See the macro for instructions on use. [Utility]

**BLOCKCPY** | Simulates the Ctrl Insert and Ctrl Delete keys on

**BLOCKMOV** | enhanced keyboards

**DIRNAME** Names directories for long document displays. Not fully generalized for general use.

**HSPACE** Replaces spaces with hard spaces for remainder of line. Used by rolodex macros to control sorting. John Smith, Esq. sorts on E as the last word while John Smith,[ ]Esq. sorts on S. [Rolodex Utility]

**ID** A nice little trailer macro if you don't need the bells and whistles of the big one.

**SBR\_** A collection of some of the subroutines used in the other macros. Collected here for budding macro writers.

The need for the \*.DOC files are explained in README.1ST
