

# **POW** v2.0

## **QWK mail reader for Windows**

© 1993-96 Gina Davis & GD Custom Software.

### **Installation**

The opening dialog consists of a **Text Box** in which to put the directory where the main POW program files are to be installed, plus **Standard**, **Custom**, **Exit Setup** and **Help** buttons.

#### **Buttons**

- Standard** Installs all files into the specified POW program directory, avoiding possible conflicts with other applications as far as possible.
- Custom** Calls the Options Dialog where the user may choose the Windows or Windows/System directory for files that may be shared with other applications.
- Exit Setup** Cancels the installation and returns to Windows.

## Options Dialog

This contains two groups of **options buttons** to choose whether to install **CMDIALOG.VBX & GRID.VBX** into the **POW program directory** or **Windows/System** and the **Spelling Checker** files (SPELMATE.DLL and later the dictionaries) into the **POW program directory** or **Windows**.

When **upgrading POW** (by choosing to install into a directory containing a previous version), extra options are provided. Check boxes allow for optional re-creation of **POW Program Manager group** and updating zip/unzip **PIF files** (overwriting existing files). This is to cater for users who have altered their POW group or PIF settings and don't want them reset.

### Buttons

- Continue** Continues Installation into the specified directories.
- Exit Setup** Cancels the installation and returns to Windows.
