Introduction

The ChkBox Listbox is a versatile listbox which is designed to indicate selection with a checkbox or asterisk. As an added bonus, ChkBox supports blinking and foreground color for individual entries and an adjustable blink rate.

The ChkBox supports three modes: Simple, CheckBox and Asterisk. Simple Mode enables the user to use all the features but disables the selection feature. CheckBox and Asterisk allow the user to indicate selection through a CheckBox or Asterisk respectively.

For information on the ChkBox, please contact Michael Stoler at CIS: 74601,717 or INTERNET:74601.717@compuserve.com. A 32 bit OCX Version is planned for 1996. Thank you for your support.

Please feel free to evaluate ChkBox with this demo version. The demo version is a fully functional control with a limit of 30 entries.   Reg.doc contains a registration form for the release version. The release version contains complete documentation in a help file.

Propertities

Blink(ListIndex):   TRUE sets the ListIndex item to blink; FALSE turns Blink Off

Checked(ListIndex):   Sets state of specified item to checked

ItemData(ListIndex):   Longdata item used to store data for specified index

ItemForeColor(listIndex):   Sets foreground color of specified entry to a color

Methods

AddItem item,index: Adds the item to the ChkList. Index is an optional index

RemoveItem index: Removes item at specified index
