Cyan text on red background

Normal system color
on white background

Fixed color black text (Win95 test only)

This is a <u>sample jump hotspot</u> in 10-point text.
This is a <u>sample popup hotspot</u> in 10-point text.
This is a <u>sample macro hotspot</u> in 10-point text.

New colors will apply to *open* helpfiles
only when they are restarted.

Close test window

Close window before trying new colors
(Found the Easter egg yet?)

Windows and Windows 95 both have a "secret utility" hidden in the SYSTEM directory called SYSEDIT.EXE.   This handy utility will allow you to load, view and edit all of your configuration files at one time into one Notepad-like program.   These files include AUTOEXEC.BAT, CONFIG.SYS, WIN.INI and SYSTEM.INI, and others too depending on your version of Windows.

You can start this program at any time by clicking **File** from Program Manager (or, in Windows 95, clicking the **Start** button), selecting **Run**, and typing **sysedit** in the **Command line:** box.   Naturally, you should not try to edit these files unless you know what you are doing, but there's no harm in looking.
