General Information

The purpose of the program

Test Menu

This menu can be used to start a new test or print the results from a test taken previously. To exit the program select exit or press Alt-x.

Purpose of the program

This program allows the instructor to give tests by using a computer instead of the traditional paper and pencil method. Each time a test is taken the questions are given in a different order. The results are stored either on a hard drive or floppy disk and can be printed out at later time. The computer grades the test. Tests are created using the program Maketest which comes with the registered copy of Taketest. See register.doc for more information.

New Test

This menu item will allow the user to choose a test from a list of tests in a file dialog box. One test can be taken during each test session. Enter student information into the dialog box . The last name and first name are required, other entries are optional. To take another test exit the program and start it again. The test is presented and the answer entered into the answer box. Press Enter or click on the OK button when completed with the question. After all of the questions are completed the user is asked for the disk on which the results are to be stored. Choose the appropriate disk. It is suggested that the results either be printed right away or stored on a floppy disk and printed later. If a floppy disk is used each student should have their own disk.

Print File

Choosing this menu item will print the results of the last test taken. Choose the drive where the results are stored. The students name, date, test title, and the number of questions answered correctly will be printed. Course, period, teacher, and the actual questions and answers can also be printed if desired. Once a set of results is printed the answers cannot be changed.

Exit

To quit the program select this menu item or press Alt-x.

Checking your answers

To check your answers select this item. Each question along with the answer the user put will be presented. The answers can be then changed if desired.
