Contents

What Pegasus Mail? v1.0

We wanted a Windows 95 Utility that would notify users when they logged in whether they had any New Mail and a list of Noticeboards, each preceeded by the number of Notices not yet read.

This was designed for Windows 95, Pegasus Mail and Netware Client32 for Windows 95.

This product is released as freeware but is copyrighted - © 1996 ESB Consultancy.

If you have any suggestions please contact us by any of the means below. We would like to hear from anyone who uses the package - it encourages us to release more of our in-house goodies.

Installation

WhatMail.EXE and WhatMail.HLP should be placed in a PUBLIC Area on your FileServer, with the attributes set to ReadOnly, Shareable.

The WhatMail.EXE should be placed in yuor Windows 95 Startup Group

Command Line Options

/AutoExit - causes the program to Automatically teminate if there are no messages.

Known Limitations

 - Does not support NoticeBoards within NoticeBoards (only does top Level)
 - Limited Error Checking

Development

From an idea by Peter Ogden
Code by Glenn Crouch & Peter Ogden.

Developed using Borland's Delphi 2.0
