Q) Why do I get the error "Cannot find xxxxx.pas?"
A) There are two possible causes for this error. The first is that you have break on exceptions enabled and a legitimate exception was raise. Since the integrated debugger will try to take you to the offending source code, and you do not have source code in the trial version, you get this error.

The second cause seems to be a problem with the integrated debugger. It is trying to break even if break on exceptions is off and there is no exception. There are two ways to remedy the problem. The easiest is to turn off integrated debugging. The second is to include all integrated debug info in your project (Options|Project|Compiler) and build all. This usually solves the problem.

Q) Is source included in the registered version?
A) Yes. Full source code is included with the registered version.

Q) Will there be a 32 bit version?
A) Yes. The 32 bit version is ready for Delphi 2.0.

Q) How do I register?
A) See order.wri for registration information.

Q) Will I receive updates after I register?
A) Yes, free updates will be sent to all registered users for a period of time.

Q) Once I register, how long will it take to get source code?
A) If you include an e-mail address or register via CompuServe, you will receive source code via e-mail the same day I receive the registration.
