QuickMem Greek v1.0a

QuickMem Greek can be run from any directory provided you set its working directory to the same directory in which the program is located. This is for the creation and access of the data file *qmemgrk.dat*.

For example (when setting up in *Program Manager*):

Description	QuickMem Greek 1.0
Path	c:\quickmem\qmemgrk.exe
Working Directory	c:\quickmem

If you have other programs created with Borland C++ you may already have the file *bwcc.dll* on your hard disk drive. If so, it is not necessary to have two copies provided the file is available to *Windows* through a path statement.

Also, this program assumes you have installed the two fonts *Times New Roman* and *Symbol* that came with *Windows*. If you do not have these fonts installed I recommend you install them before running *QuickMem Greek*.

qmemgk1a.zip contains these five files:

qmemgrk.exe	main executable
qmemgrk.hlp	*Windows Help* file
bwcc.dll	*Borland Windows Custom Controls*
readme.wri	you're looking at it
file_id.diz	BBS description file
